2" OXO-VORUSCHARIN AND ANALOGUES THEREOF

FIELD OF THE INVENTION

The present invention relates to novel 2" oxo-voruscharin and analogues. In addition, the present invention relates to pharmaceutical compositions comprising the novel 2" oxo-voruscharin or analogues. The present invention further relates to the use of the 2" oxo-voruscharin and analogues as a medicament and in the preparation of a medicament for treating cancer. The present invention also relates to a method of treating cancer.

10 BACKGROUND OF THE INVENTION

Plants of the family *Asclepiadaceae* are known to be extremely poisonous. A well-known representative of the *Asclepiadaceae* is *Calotropis procera*. Extracts from *Calotropis procera* plants have traditionally been used as an abortifacient, for infanticide, for rheumatic pain and to produce a purgative. The plant is poisonous, but has been used in small amounts for folk remedies for various ailments, and the plant continues to be studied for anti-coagulant and anti-cancer properties. The stems, flowers and leaves of *Calotropis procera* plants are known to contain certain compounds known as cardenolides. Examples of cardenolide glycosides found in *C. procera* include asclepin, voruscharin, uscharin, uscharidin, calotropin, calactin, calotoxin, calotropagenin and uzarigenin. Recently, cytotoxic activity has been attributed to these cardenolide glycosides, and they are exploited in human therapies for treating cardiac insufficiencies.

It has been described that the cardenolide uscharin is particularly useful for medical purposes. Uscharin has been isolated and its chemical structure was determined (structure I).

structure I: uscharin

Compositions comprising uscharin or salts thereof have been reported to be usable for treatment of medical conditions related to cell proliferation. For example, US patent No 6,342,490 and WO- 9852562 both describe compositions comprising uscharin or salts thereof and the use of uscharin to combat cell proliferation, e.g. in the treatment of cancer.

5

Some of the known cardenolide glycosides, f.e. calotropin and uzarigenin, are cytotoxic for cell cultures but are not mentioned to show *in vivo* tumor-inhibiting activity. Also uscharin has been shown to have some cytotoxic activity on tumor cells *in vitro*. In addition, uscharin was also described to have *in vivo* tumor-inhibiting effects, as for instance described in US patent

10

No 6,342,490. Analogues of uscharin have not been reported so far to be useful for medical applications.

It is a general object of the present invention to provide novel cardenolide glycosides, which have a cytotoxic activity. It is another general object of the present invention to provide novel

15

cardenolide glycosides, which can be exploited in medical applications.

SUMMARY

In a first aspect, the present invention relates to a compound of the formula I or a pharmaceutically acceptable salt thereof,

20

formula I

25

wherein R¹ is selected from the group comprising alkyl, alkenyl, alkynyl, alkyloxy, alkyloxyalkyl, alkylthioalkyl, alkyloxycarbonyl, alkylthiocarbonyl, alkanoyl, cycloalkylalkyl, cycloalkylcarbonyl, cycloalkylalkanoyl, cycloalkylthiocarbonyl, cycloalkylalkoxycarbonyl, cycloalkylalkoxythiocarbonyl, cycloalkylthioalkyl, alkylcarbonyloxyalkyl, arylcarbonyloxyalkyl,

cycloalkylcarbonyloxyalkyl, silyloxyalkyl, aralkyl, arylalkenyl, arylcarbonyl, aryloxycarbonyl, arylthiocarbonyl, aralkoxycarbonyl, arylalkylthiocarbonyl, aryloxyalkyl, arylthioalkyl, haloalkyl, hydroxyalkyl, aralkanoyl, aroyl, aryloxycarbonylalkyl, aryloxyalkanoyl, carboxyl, formyl, alkenylcarbonyl, alkynylcarbonyl, Het¹, Het¹alkyl, Het¹oxyalkyl, Het¹aryl, Het¹aralkyl, Het¹cycloalkyl, Het¹carbonyl, Het¹alkoxycarbonyl, Het¹alkylthiocarbonyl, Het¹oxycarbonyl, Het¹thiocarbonyl, Het¹alkanoyl, Het¹aralkanoyl, Het¹aryloxyalkyl, Het¹alkyloxyalkyl, Het¹arylthioalkyl, Het¹aryloxycarbonyl, Het¹aralkoxycarbonyl, Het¹aroyl, Het¹oxyalkylcarbonyl, Het¹alkyloxyalkylcarbonyl, Het¹aryloxyalkylcarbonyl, Het¹carbonyloxyalkyl, Het¹alkylcarbonyloxyalkyl, Het¹aralkylcarbonyloxyalkyl, Het²alkyl; Het²oxyalkyl, Het²alkyloxyalkyl, Het²aralkyl, Het²carbonyl, Het²oxycarbonyl, Het²thiocarbonyl, Het²alkanoyl; Het²alkylthiocarbonyl, Het²alkoxycarbonyl, Het²aralkanoyl, Het²aralkoxycarbonyl, Het²aryloxycarbonyl, Het²aroyl, Het²aryloxyalkyl, Het²arylthioalkyl, Het²oxyalkylcarbonyl, Het²alkyloxyalkylcarbonyl, Het²aryloxyalkylcarbonyl, Het²carbonyloxyalkyl, Het²alkylcarbonyloxyalkyl, Het²aralkylcarbonyloxyalkyl, cyano, aminocarbonyl, aminoalkanoyl, aminoalkyl, CR⁶=NR⁷ or CR⁶=N(OR⁷)

with R⁶ and R⁷ being independently selected from the group comprising hydrogen, hydroxyl, alkyl, aryl, Het¹, Het¹alkyl, Het¹aryl, alkenyl, alkynyl, aminoalkyl, aminoaryl, alkylcarbonylamino, arylcarbonylamino alkylthiocarbonylamino and arylthiocarbonylamino;

wherein R² and R³ are independently selected from the group comprising hydroxyl, alkyloxy, alkylsilyloxy, arylsilyloxy, alkyloxyalkyloxy, cycloalkyloxy cycloalkylalkyloxy, aralkyloxy, aryloxyalkyloxy, silyloxy, alkylcarbonyloxy, arylcarbonyloxy, cycloalkylcarbonyloxy, haloalkyloxy, hydroxyalkyloxy, aralkanoyloxy, aroyloxy, aryloxycarbonylalkyloxy, formyloxy, Het¹alkyloxy, Het¹oxy, Het¹oxyalkyloxy, Het¹aryloxy, Het¹aralkyloxy, Het¹cycloalkyloxy, Het¹carbonyloxy, Het¹oxycarbonyloxy, Het¹alkanoyloxy, Het¹aralkanoyloxy, Het¹aryloxyalkyloxy, Het¹aroyl, Het²oxy, Het²alkyloxy; Het²oxyalkyloxy, Het²aralkyloxy, Het²cycloalkyloxy, Het²alkanoyloxy, Het²aralkanoyloxy, Het²carbonyloxy, Het²aryloxy, Het²aryloxyalkyloxy,

wherein R¹, R² and R³ are optionally substituted by one or more substituents independently selected from the group comprising alkyl, aralkyl, aryl, Het¹, Het², cycloalkyl, alkyloxycarbonyl, carboxyl, aminocarbonyl, mono- or di(alkyl)aminocarbonyl, aminosulfonyl, alkylS(=O)_t, hydroxy, cyano, halogen or amino optionally mono- or disubstituted wherein the substituents are independently selected from the group comprising alkyl, aryl, aralkyl, aryloxy, arylamino, arylthio, aryloxyalkyl, arylaminoalkyl, aralkoxy, alkylthio, alkoxy, aryloxyalkoxy, arylaminoalkoxy, aralkylamino, aryloxyalkylamino, arylaminoalkylamino, arylthioalkoxy,

arylthioalkylamino, aralkylthio, aryloxyalkylthio, arylaminoalkylthio, arylthioalkylthio, alkylamino, cycloalkyl, cycloalkylalkyl, Het¹, Het², Het¹alkyl, Het²alkyl, Het¹amino, Het²amino, Het¹alkylamino, Het²alkylamino, Het¹thio, Het²thio, Het¹alkylthio, Het²alkylthio, Het¹oxy and Het²oxy, OR⁸, SR⁸, SO₂NR⁸R⁹, SO₂N(OH)R⁸, CN, CR⁸=NR⁹, S(O)R⁸, SO₂R⁸, CR⁸=N(OR⁹), N₃, NO₂, NR⁸R⁹, N(OH)R⁸, C(O)R⁸, C(S)R⁸, CO₂R⁸, C(O)SR⁸, C(O)NR⁸R⁹, C(S)NR⁸R⁹, C(O)N(OH)R⁹, C(S)N(OH)R⁸, NR⁸C(O)R⁹, NR⁸C(S)R⁹, N(OH)C(O)R⁹, N(OH)C(S)R⁸, NR⁸CO₂R⁹, NR⁸C(O)NR⁹R¹⁰, and NR⁸C(S)NR⁹R¹⁰, N(OH)CO₂R⁸, NR⁸C(O)SR⁹, N(OH)C(O)NR⁸R⁹, N(OH)C(S)NR⁸R⁹, NR⁸C(O)N(OH)R⁹, NR⁸C(S)N(OH)R⁹, NR⁸SO₂R⁹, NHSO₂NR⁸R⁹, NR⁸SO₂NHR⁹, P(O)(OR⁸)(OR⁹),

with t being an integer between 1 and 2, and R⁸, R⁹ and R¹⁰ being each independently selected from the group comprising hydrogen, hydroxyl, alkyl, aryl, Het¹, Het¹alkyl, Het¹aryl, alkenyl, alkynyl, aminoalkyl, aminoaryl, alkylcarbonylamino, arylcarbonylamino, alkylthiocarbonylamino and arylthiocarbonylamino;

and wherein R⁴ is oxo and R⁵ is hydrogen or alkyl.

In particular, the invention relates to a compound having the above-described formula I, wherein R¹ is formyl (-CHO); wherein R² and R³ are hydroxyl; wherein R⁴ is oxo; and wherein R⁵ is hydrogen. This particular compound is referred to as 2'' oxo-voruscharin. Thus, the present invention provides novel 2'' oxo-voruscharin and its analogues. Importantly, these compounds show *in vitro* as well as *in vivo* cytotoxic anti-tumor effects and are consequently very suitable for use in all kind of therapeutic applications as described below.

In addition, the present invention relates to pharmaceutical compositions comprising the above-described compounds. Furthermore, the present invention relates to the use of said compounds as a medicament for the treatment of diseases associated with cell proliferation, in particular for treatment of cancer. The present invention further relates to the use of the above-described compounds in the preparation of a medicament for the treatment of cancer, and a method of treating cancer.

DETAILED DESCRIPTION OF THE FIGURES

Figure 1 represents the anti-tumor activity of the compound uscharin on six human cancer cell lines.

Figure 2 to 6 represent the anti-tumor activity of the different compounds according to the invention on six human cancer cell lines. Figure 2 represents the activity of compound A, 2''oxo-voruscharin. Figure 3 and 4 represent the activity of compound B and C, 2'' oxo-voruscharin analogues. Figure 5 and 6 represent the activity of compound C and D, uscharin analogues.

Figure 7 compares the cytotoxic activity of uscharin and 2''oxo-voruscharin (compound A) on six human cancer cell lines. Figure 8 compares the cytotoxic activity of 2''oxo-voruscharin and two of its analogues, compounds B and C. Figure 9 compares the activity of uscharin and two of its analogues, compounds D and E on six human cancer cell lines.

Figure 10 and 11 represent the effects of the compound uscharin and 2'' oxo-voruscharin, respectively on the cell cycle kinetics of Hs683 human cancer cells. Figure 12 and 13 represent the effects of the compound uscharin and 2'' oxo-voruscharin, respectively, on the cell cycle kinetics of J82 human cancer cells. Figure 14 and 15 represent the effects of the compound uscharin and 2'' oxo-voruscharin, respectively, on the cell cycle kinetics of HCT-15 human cancer cells.

DETAILED DESCRIPTION

In a first embodiment, the present invention provides for a compound of the formula I or a pharmaceutically acceptable salt or ester thereof,

formula I

wherein R¹ is selected from the group comprising alkyl, alkenyl, alkynyl, alkyloxy, alkyloxyalkyl, alkylthioalkyl, alkyloxycarbonyl, alkylthiocarbonyl, alkanoyl, cycloalkylalkyl, cycloalkylcarbonyl, cycloalkylalkanoyl, cycloalkylthiocarbonyl, cycloalkylalkoxycarbonyl,

cycloalkylalkoxythiocarbonyl, cycloalkylthioalkyl, alkylcarbonyloxyalkyl, arylcarbonyloxyalkyl, cycloalkylcarbonyloxyalkyl, silyloxyalkyl, aralkyl, arylalkenyl, arylcarbonyl, aryloxy carbonyl, arylthiocarbonyl, aralkoxycarbonyl, arylalkylthiocarbonyl, aryloxyalkyl, arylthioalkyl, haloalkyl, hydroxyalkyl, aralkanoyl, aroyl, aryloxy carbonylalkyl, aryloxyalkanoyl, carboxyl, formyl, alkenylcarbonyl, alkynylcarbonyl, Het¹, Het¹alkyl, Het¹oxyalkyl, Het¹aryl, Het¹aralkyl, Het¹cycloalkyl, Het¹carbonyl, Het¹alkoxycarbonyl, Het¹alkylthiocarbonyl, Het¹oxycarbonyl, Het¹thiocarbonyl, Het¹alkanoyl, Het¹aralkanoyl, Het¹aryloxyalkyl, Het¹alkyloxyalkyl, Het¹arylthioalkyl, Het¹aryloxy carbonyl, Het¹aralkoxycarbonyl, Het¹aroyl, Het¹oxyalkylcarbonyl, Het¹alkyloxyalkylcarbonyl, Het¹aryloxyalkylcarbonyl, Het¹carbonyloxyalkyl, Het¹alkylcarbonyloxyalkyl, Het¹aralkylcarbonyloxyalkyl, Het²alkyl; Het²oxyalkyl, Het²alkyloxyalkyl, Het²aralkyl, Het²carbonyl, Het²oxycarbonyl, Het²thiocarbonyl, Het²alkanoyl, Het²alkylthiocarbonyl, Het²alkoxycarbonyl, Het²aralkanoyl, Het²aralkoxycarbonyl, Het²aryloxy carbonyl, Het²aroyl, Het²aryloxyalkyl, Het²arylthioalkyl, Het²oxyalkylcarbonyl, Het²alkyloxyalkylcarbonyl, Het²aryloxyalkylcarbonyl, Het²carbonyloxyalkyl, Het²alkylcarbonyloxyalkyl, Het²aralkylcarbonyloxyalkyl, cyano, aminocarbonyl, aminoalkanoyl, aminoalkyl, CR⁶=NR⁷ or CR⁶=N(OR⁷)

with R⁶ and R⁷ being independently selected from the group comprising hydrogen, hydroxyl, alkyl, aryl, Het¹, Het¹alkyl, Het¹aryl, alkenyl, alkynyl, aminoalkyl, aminoaryl, alkylcarbonylamino, arylcarbonylamino, alkylthiocarbonylamino and arylthiocarbonylamino;

wherein R² and R³ are independently selected from the group comprising hydroxyl, alkyloxy, alkylsilyloxy, arylsilyloxy, alkyloxyalkyloxy, cycloalkyloxy, cycloalkylalkyloxy, aralkyloxy, aryloxyalkyloxy, silyloxy, alkylcarbonyloxy, arylcarbonyloxy, cycloalkylcarbonyloxy, haloalkyloxy, hydroxyalkyloxy, aralkanoyloxy, aroyloxy, aryloxy carbonylalkyloxy, formyloxy, Het¹alkyloxy, Het¹oxy, Het¹oxyalkyloxy, Het¹aryloxy, Het¹aralkyloxy, Het¹cycloalkyloxy, Het¹carbonyloxy, Het¹oxycarbonyloxy, Het¹alkanoyloxy, Het¹aralkanoyloxy, Het¹aryloxyalkyloxy, Het¹aroyl, Het²oxy, Het²alkyloxy; Het²oxyalkyloxy, Het²aralkyloxy, Het²cycloalkyloxy, Het²alkanoyloxy, Het²aralkanoyloxy, Het²carbonyloxy, Het²aryloxy, Het²aryloxyalkyloxy,

wherein R¹, R² and R³ are optionally substituted by one or more substituents independently selected from the group comprising alkyl, aralkyl, aryl, Het¹, Het², cycloalkyl, alkyloxy carbonyl, carboxyl, aminocarbonyl, mono- or di(alkyl)aminocarbonyl, aminosulfonyl, alkylS(=O)_n, hydroxy, cyano, halogen or amino optionally mono- or disubstituted wherein the substituents are independently selected from the group comprising alkyl, aryl, aralkyl, aryloxy, arylamino, arylthio, aryloxyalkyl, arylaminoalkyl, aralkoxy, alkylthio, alkoxy, aryloxyalkoxy,

arylaminoalkoxy, aralkylamino, aryloxyalkylamino, arylaminoalkylamino, arylthioalkoxy,
 arylthioalkylamino, aralkylthio, aryloxyalkylthio, arylaminoalkylthio, arylthioalkylthio,
 alkylamino, cycloalkyl, cycloalkylalkyl, Het¹, Het², Het¹alkyl, Het²alkyl, Het¹amino, Het²amino,
 Het¹alkylamino, Het²alkylamino, Het¹thio, Het²thio, Het¹alkylthio, Het²alkylthio, Het¹oxy and
 5 Het²oxy, OR⁸, SR⁸, SO₂NR⁸R⁹, SO₂N(OH)R⁸, CN, CR⁸=NR⁹, S(O)R⁸, SO₂R⁸, CR⁸=N(OR⁹),
 N₃, NO₂, NR⁸R⁹, N(OH)R⁸, C(O)R⁸, C(S)R⁸, CO₂R⁸, C(O)SR⁸, C(O)NR⁸R⁹, C(S)NR⁸R⁹,
 C(O)N(OH)R⁹, C(S)N(OH)R⁸, NR⁸C(O)R⁹, NR⁸C(S)R⁹, N(OH)C(O)R⁹, N(OH)C(S)R⁸,
 NR⁸CO₂R⁹, NR⁸C(O)NR⁹R¹⁰, and NR⁸C(S)NR⁹R¹⁰, N(OH)CO₂R⁸, NR⁸C(O)SR⁹,
 10 N(OH)C(O)NR⁸R⁹, N(OH)C(S)NR⁸R⁹, NR⁸C(O)N(OH)R⁹, NR⁸C(S)N(OH)R⁹, NR⁸SO₂R⁹,
 NHSO₂NR⁸R⁹, NR⁸SO₂NHR⁹, P(O)(OR⁸)(OR⁹),

with t being an integer between 1 and 2, and R⁸ R⁹ and R¹⁰ being each independently
 selected from the group comprising hydrogen, hydroxyl, alkyl, aryl, Het¹, Het¹alkyl, Het¹aryl,
 alkenyl, alkynyl, aminoalkyl, aminoaryl, alkylcarbonylamino, arylcarbonylamino
 alkylthiocarbonylamino and arylthiocarbonylamino;

15 and wherein R⁴ is oxo and R⁵ is hydrogen or alkyl.

Whenever the term "substituted" is used in the present invention, it is meant to indicate that
 one or more hydrogens on the atom indicated in the expression using "substituted" is
 replaced with a selection from the indicated group, provided that the indicated atom's normal
 20 valency is not exceeded, and that the substitution results in a chemically stable compound,
 i.e. a compound that is sufficiently robust to survive isolation to a useful degree of purity from
 a reaction mixture, and formulation into a therapeutic agent.

25 As used herein, the term "halo" or "halogen" as a group or part of a group is generic for fluoro,
 chloro, bromo or iodo.

The term "alkyl", alone or in combination, means straight and branched chained saturated
 hydrocarbon radicals containing from 1 to 10 carbon atoms, preferably from 1 to 8 carbon
 atoms, more preferably 1 to 6 carbon atoms. Examples of such radicals include methyl, ethyl,
 30 n-propyl, isopropyl, n-butyl, isobutyl, sec-butyl, tert-butyl, 2-methylbutyl, pentyl, iso-amyl,
 hexyl, 3-methylpentyl, octyl and the like.

The term "alkenyl", alone or in combination, defines straight and branched chained
 hydrocarbon radicals containing from 2 to about 18 carbon atoms, preferably from 2 to 8

carbon atoms, more preferably 2-6 carbon atoms containing at least one double bond such as, for example, ethenyl, propenyl, butenyl, pentenyl, hexenyl and the like.

5 The term "alkynyl", alone or in combination, defines straight and branched chained hydrocarbon radicals having from 2 to 10 carbon atoms containing at least one triple bond, more preferably from 2 to about 6 carbon atoms. Examples of alkynyl radicals include ethynyl, propynyl, (propargyl), butynyl, pentynyl, hexynyl and the like.

10 The term "cycloalkyl" alone or in combination, means a saturated or partially saturated monocyclic, bicyclic or polycyclic alkyl radical wherein each cyclic moiety contains from about 3 to about 8 carbon atoms, more preferably from about 3 to about 7 carbon atoms. Examples of monocyclic cycloalkyl radicals include cyclopropyl, cyclobutyl, cyclopentyl, cyclohexyl, cycloheptyl, cyclooctyl and the like. Examples of polycyclic cycloalkyl radicals include decahydronaphthyl, bicyclo [5.4.0] undecyl, adamantyl, and the like.

15

The term "cycloalkylalkyl" means an alkyl radical as defined herein, in which at least one hydrogen atom on the alkyl radical is replaced by a cycloalkyl radical as defined herein. Examples of such cycloalkylalkyl radicals include cyclopropylmethyl, cyclobutylmethyl, cyclopentylmethyl, cyclohexylmethyl, 1-cyclopentylethyl, 1-cyclohexylethyl, 2-cyclopentylethyl, 2-cyclohexylethyl, cyclobutylpropyl, cyclopentylpropyl, 3-cyclopentylbutyl, cyclohexylbutyl and the like.

20

The term "aryl" alone or in combination, is meant to include phenyl and naphthyl which both may be optionally substituted with one or more substituents independently selected from alkyl, alkoxy, halogen, hydroxy, amino, nitro, cyano, haloalkyl, carboxy, alkoxycarbonyl, cycloalkyl, Het¹, amido, optionally mono- or disubstituted aminocarbonyl, methylthio, methylsulfonyl, and phenyl optionally substituted with one or more substituents selected from C₁₋₆alkyl, C₁₋₆alkyloxy, halogen, hydroxy, optionally mono- or disubstituted amino, nitro, cyano, haloC₁₋₆alkyl, carboxyl, C₁₋₆alkoxycarbonyl, C₃₋₇cycloalkyl, Het¹, optionally mono- or disubstituted aminocarbonyl, methylthio and methylsulfonyl; whereby the optional substituents on any amino function are independently selected from alkyl, alkyloxy, Het¹, Het¹alkyl, Het¹alkyl, Het¹oxy, Het¹oxyalkyl, phenyl, phenyloxy, phenyloxyalkyl, phenylalkyl, alkyloxycarbonylamino, amino, and aminoalkyl whereby each of the amino groups may optionally be mono- or where possible di-substituted with alkyl. Examples of aryl includes

30

phenyl, p-tolyl, 4-methoxyphenyl, 4-(tert-butoxy)phenyl, 3-methyl-4-methoxyphenyl, 4-fluorophenyl, 4-chlorophenyl, 3-nitrophenyl, 3-aminophenyl, 3-acetamidophenyl, 4-acetamidophenyl, 2-methyl-3-acetamidophenyl, 2-methyl-3-aminophenyl, 3-methyl-4-aminophenyl, 2-amino-3-methylphenyl, 2,4-dimethyl-3-aminophenyl, 4-hydroxyphenyl, 3-methyl-4-hydroxyphenyl, 1-naphthyl, 2-naphthyl, 3-amino-1-naphthyl, 2-methyl-3-amino-1-naphthyl, 6-amino-2-naphthyl, 4,6-dimethoxy-2-naphthyl and the like.

The term "aralkyl" alone or in combination, means an alkyl as defined herein, wherein an alkyl hydrogen atom is replaced by an aryl as defined herein. Examples of aralkyl radicals include benzyl, phenethyl, dibenzylmethyl, methylphenylmethyl, 3-(2-naphthyl)-butyl, and the like.

As used herein, the term "oxo" or " $=O$ " forms a carbonyl moiety with the carbon atom to which it is attached. The term "formyl" or " $-CHO$ " is an aldehyde moiety whereby the C atom binds to the carbon atom to which it is attached. As used herein, the term "formyloxy" or " $-OCHO$ " forms a formic ester moiety whereby the oxygen atom binds to the carbon atom to which it is attached. As used herein, the term "carboxyl" or " $-COOH$ " is an acid moiety whereby the carbon atom binds to the carbon atom to which it is attached.

The term "haloalkyl" alone or in combination, means an alkyl radical having the meaning as defined above wherein one or more hydrogens are replaced with a halogen, preferably, chloro or fluoro atoms, more preferably fluoro atoms. Examples of such haloalkyl radicals include chloromethyl, 1-bromoethyl, fluoromethyl, difluoromethyl, trifluoromethyl, 1,1,1-trifluoroethyl and the like.

The term "Het¹" alone or in combination, is defined as a saturated or partially unsaturated monocyclic, bicyclic or polycyclic heterocycle having preferably 3 to 12 ring members, more preferably 5 to 10 ring members and more preferably 5 to 6 ring members, which contains one or more heteroatom ring members selected from nitrogen, oxygen or sulfur and which is optionally substituted on one or more carbon atoms by alkyl, alkyloxy, halogen, hydroxy, oxo, optionally mono- or disubstituted amino, nitro, cyano, haloalkyl, carboxyl, alkoxycarbonyl, cycloalkyl, optionally mono- or disubstituted aminocarbonyl, methylthio, methylsulfonyl, aryl and a saturated or partially unsaturated monocyclic, bicyclic or tricyclic heterocycle having 3 to 12 ring members which contains one or more heteroatom ring members selected from nitrogen, oxygen or sulfur and whereby the optional substituents on any amino function are

independently selected from alkyl, alkyloxy, Het², Het²alkyl, Het²oxy, Het²oxyalkyl, aryl, aryloxy, aryloxyalkyl, aralkyl, alkyloxycarbonylamino, amino, and aminoalkyl whereby each of the amino groups may optionally be mono- or where possible di-substituted with alkyl.

- 5 The term "Het²" as a group or part of a group is defined as an aromatic monocyclic, bicyclic or tricyclic heterocycle having preferably 3 to 12 ring members, more preferably 5 to 10 ring members and more preferably 5 to 6 ring members, which contains one or more heteroatom ring members selected from nitrogen, oxygen or sulfur and which is optionally substituted on one or more carbon atoms by alkyl, alkyloxy, halogen, hydroxy, optionally mono- or
- 10 disubstituted amino, nitro, cyano, haloalkyl, carboxyl, alkoxycarbonyl, cycloalkyl, optionally mono- or disubstituted aminocarbonyl, methylthio, methylsulfonyl, aryl, Het¹ and an aromatic monocyclic, bicyclic or tricyclic heterocycle having 3 to 12 ring members; whereby the optional substituents on any amino function are independently selected from alkyl, alkyloxy, Het¹, Het¹alkyl, Het¹oxy, Het¹oxyalkyl, aryl, aryloxy, aryloxyalkyl, aralkyl,
- 15 alkyloxycarbonylamino, amino, and aminoalkyl whereby each of the amino groups may optionally be mono- or where possible di-substituted with alkyl.

The term "alkoxy" or "alkyloxy", alone or in combination, means an alkyl ether radical wherein the term alkyl is as defined above. Examples of suitable alkyl ether radicals include methoxy,

20 ethoxy, n-propoxy, isopropoxy, n-butoxy, iso-butoxy, sec-butoxy, tert-butoxy, hexanoxy and the like.

The term "arylthioalkoxy" means alkoxy as defined herein, wherein an alkyl hydrogen atom is replaced by an arylthio as defined herein. Examples of (arylthio) alkoxy radicals include 2-

25 (phenylthio)-ethoxy, and the like.

The term "alkanoyl" or "alkylcarbonyl", alone or in combination, means an acyl radical derived from an alkanecarboxylic acid, examples of which include acetyl, propionyl, butyryl, valeryl, 4-methylvaleryl, and the like.

30 The term "alkylamino" means an alkyl amine radical, wherein the term "alkyl" is defined as above. Examples of alkylamino radicals include methylamino (NHCH₃), ethylamino (NHCH₂CH₃), n-propylamino, isopropylamino, n-butylamino, isobutylamino, sec-butylamino, tert-butylamino, n-hexylamino, and the like.

5 The term "alkylthio" means an alkyl thioether radical, wherein the term "alkyl" is defined as above. Examples of alkylthio radicals include methylthio (SCH_3), ethylthio (SCH_2CH_3), n-propylthio, isopropylthio, n-butylthio, isobutylthio, sec-butylthio, tert-butylthio, n-hexylthio, and the like.

10 The term "aminoalkanoyl" means an acyl group derived from an amino-substituted alkylcarboxylic acid wherein the amino group can be a primary, secondary or tertiary amino group containing substituents selected from alkyl, aryl, aralkyl, cycloalkyl, cycloalkylalkyl radicals and the like.

15 The term "aminocarbonyl" alone or in combination, means an amino-substituted carbonyl (carbamoyl) group wherein the amino group can be a primary, secondary or tertiary amino group containing substituents selected from alkyl, aryl, aralkyl, cycloalkyl, cycloalkylalkyl radicals and the like.

20 The term "aralkanoyl" means an acyl radical derived from an aryl-substituted alkanecarboxylic acid such as phenylacetyl, 3-phenylpropionyl (hydrocinnamoyl), 4-phenylbutyryl, (2-naphthyl)acetyl, 4-chlorohydrocinnamoyl, 4-aminohydrocinnamoyl, 4-methoxyhydrocinnamoyl, and the like.

25 The term "aralkoxy" means alkoxy as defined herein, wherein an alkyl hydrogen atom is replaced by an aryl as defined herein. Examples of aralkoxy radicals include 2-phenylethoxy, 2-phenyl-1-propoxy, and the like.

The term "aralkoxycarbonyl", alone or in combination, means a radical of the formula aralkyl-O-C(O)- in which the term "aralkyl" has the significance given above. Examples of an aralkoxycarbonyl radical are benzyloxycarbonyl and 4-methoxyphenylmethoxycarbonyl.

30 The term "aralkylamino" means alkylamino as defined herein, wherein an alkyl hydrogen atom is replaced by an aryl as defined herein. Examples of aralkylamino radicals include 2-phenethylamino, 4-phenyl-n-butylamino, and the like.

The term "aralkylthio" means alkylthio as defined herein, wherein an alkyl hydrogen atom is replaced by an aryl as defined herein. Examples of aralkylthio radicals include 3-phenyl-2-propylthio, 2- (2-naphthyl)-ethylthio, and the like.

- 5 The term "aroyl" means an acyl radical derived from an arylcarboxylic acid, aryl having the meaning given above. Examples of such arylcarboxylic acid radicals include substituted and unsubstituted benzoic or naphthoic acid such as benzoyl, 4-chlorobenzoyl, 4-carboxybenzoyl, 4-(benzyloxycarbonyl)benzoyl, 1-naphthoyl, 2-naphthoyl, 6-carboxy-2 naphthoyl, 6-(benzyloxycarbonyl)-2-naphthoyl, 3-benzyloxy-2-naphthoyl, 3-hydroxy-2-naphthoyl, 3-
10 (benzyloxyformamido)-2-naphthoyl, and the like.

The term "arylaminoalkoxy" means alkoxy as defined herein, wherein an alkyl hydrogen atom is replaced by an arylamino as defined herein. Examples of (arylamino) alkoxy radicals include 2- (phenylamino)-ethoxy, 2- (2- naphthylamino)-1-butoxy, and the like.

15

The term "arylaminoalkyl" means alkyl as defined herein, wherein an alkyl hydrogen atom is replaced by an arylamino as defined herein. Examples of arylaminoalkyl radicals include phenylaminoethyl, 4- (3-methoxyphenylamino)- 1-butyl, and the like.

- 20 The term "arylaminoalkylamino" means alkylamino as defined herein, wherein an alkyl hydrogen atom is replaced by an arylamino as defined herein. Examples of (arylamino) alkylamino radicals include 3- (naphthylamino)-propylamino, 4- (phenylamino)-1-butylamino, and the like.

- 25 The term "arylaminoalkylthio" means alkylthio as defined herein, wherein an alkyl hydrogen atom is replaced by an arylamino as defined herein. Examples of (arylamino) alkylthio radicals include 2- (phenylamino)- ethylthio, 3- (2-naphthylamino)-n-propylthio, and the like.

- 30 The term "aryloxy" means a radical of the formula aryl-O- in which the term aryl has the significance given above.

The term "aryloxyalkanoyl" means an acyl radical of the formula aryl-O-alkanoyl wherein aryl and alkanoyl have the meaning given above.

The term "aryloxyalkoxy" means alkoxy as defined herein, wherein an alkyl hydrogen atom is replaced by an aryloxy as defined herein. Examples of (aryloxy) alkoxy radicals include 2-phenoxyethoxy, 4- (3-aminophenoxy)-1- butoxy, and the like.

- 5 The term "aryloxyalkyl" means alkyl as defined herein, wherein an alkyl hydrogen atom is replaced by an aryloxy as defined herein. Examples of aryloxyalkyl radicals include phenoxyethyl, 4- (3-aminophenoxy)-1-butyl, and the like.

- 10 The term "aryloxyalkylamino" means alkylamino as defined herein, wherein an alkyl hydrogen atom is replaced by an aryloxy as defined herein. Examples of (aryloxy) alkylamino radicals include 3-phenoxy-npropylamino, 4-phenoxybutylamino, and the like.

- 15 The term "aryloxyalkylthio" means alkylthio as defined herein, wherein an alkyl hydrogen atom is replaced by an aryloxy as defined herein. Examples of (aryloxy) alkylthio radicals include 3-phenoxypropylthio, 4 (2-fluorophenoxy)-butylthio, and the like.

- 20 The term "arylthioalkylamino" means alkylamino as defined herein, wherein an alkyl hydrogen atom is replaced by an arylthio as defined herein. Examples of (arylthio) alkylamino radicals include 2- (phenylthio)- ethylamino, and the like.

- 25 The term "arylthioalkylthio" means alkylthio as defined herein, wherein an alkyl hydrogen atom is replaced by an arylthio as defined herein. Examples of (arylthio) alkylthio radicals include 2- (naphthylthio)- ethylthio, 3- (phenylthio)-propylthio, and the like.

- 30 The term "cycloalkylalkoxycarbonyl" means an acyl group derived from a cycloalkylalkoxycarboxylic acid of the formula cycloalkylalkyl-O-COOH wherein cycloalkylalkyl has the meaning given above.

- 35 The term "cycloalkylcarbonyl" means an acyl group derived from a monocyclic or bridged cycloalkanecarboxylic acid such as cyclopropylcarbonyl, cyclohexylcarbonyl, adamantylcarbonyl, and the like, or from a benz-fused monocyclic cycloalkanecarboxylic acid which is optionally substituted by one or more substituents selected from alkyl, alkoxy, halogen, hydroxy, amino, nitro, cyano, haloalkyl, carboxy, alkoxycarbonyl, cycloalkyl, heterocycloalkyl, alkanoylamino, amido, mono and dialkyl substituted amino, mono and

dialkyl substituted amido and the like, such as 1,2,3,4-tetrahydro-2-naphthoyl, 2-acetamido-1,2,3,4-tetrahydro-2-naphthoyl.

5 The term "Het²alkoxy" means alkoxy as defined herein, wherein an alkyl hydrogen atom is replaced by a Het² as defined herein. Examples of Het²alkoxy radicals include 2-pyridylmethoxy, 4- (1-imidazolyl)-butoxy, and the like.

10 The term "Het²alkyl" means alkyl as defined herein, wherein an alkyl hydrogen atom is replaced by a Het² as defined herein. Examples of Het²alkyl radicals include 2-pyridylmethyl, 3- (4-thiazolyl)-propyl, and the like.

15 The term "Het²alkylamino" means alkylamino as defined herein, wherein an alkyl hydrogen atom is replaced by a Het² as defined herein. Examples of Het²alkylamino radicals include 4-pyridylmethylanino, 3 (2-furanyl)-propylanino, and the like.

The term "Het²alkylthio" means alkylthio as defined herein, wherein an alkyl hydrogen atom is replaced by a Het² as defined herein. Examples of Het²alkylthio radicals include 3-pyridylmethylthio, 3 (4-thiazolyl)-propylthio, and the like.

20 The term "Het²amino" means Het² as defined herein, wherein a hydrogen atom on the Het² ring is replaced by a nitrogen. Het²amino radicals include, for example, 4-thiazolylanino, 2-pyridylanino, and the like.

25 The term "Het²oxy" means Het² as defined herein, wherein a hydrogen atom on the Het² ring is replaced by an oxygen. Het²oxy radicals include, for example, 4-pyridyloxy, 5-quinolyloxy, and the like.

The term "Het²oxycarbonyl" means an acyl radical derived from a carbonic acid represented by Het²-O-COOH wherein Het² has the meaning given above.

30

The term "Het²thio" means Het² as defined herein, wherein a hydrogen atom on the Het² ring is replaced by a sulfur. Het²thio radicals include, for example, 3-pyridylthio, 3-quinolythio, 4-imidazolylthio, and the like.

The term "Het¹alkanoyl" is an acyl radical derived from a Het¹-substituted alkylcarboxylic acid wherein Het¹ has the meaning given above.

5 The term "Het¹alkoxycarbonyl" means an acyl group derived from Het¹-O-COOH wherein Het¹ is as defined above.

10 As used herein before, the term "one or more" covers the possibility of all the available C-atoms, where appropriate, to be substituted, preferably, one, two or three. When any variable, e.g. halogen or alkyl, occurs more than one time in any constituent, each definition is independent.

According to a further embodiment, the present invention relates to a compound having the formula I, wherein R¹ is selected from the group comprising alkyl, alkenyl, alkynyl, alkyloxyalkyl, alkylthioalkyl, alkyloxycarbonyl, alkanoyl, cycloalkylalkyl, cycloalkylcarbonyl, cycloalkylalkanoyl, cycloalkylalkoxycarbonyl, cycloalkylthioalkyl, alkylcarbonyloxyalkyl, arylcarbonyloxyalkyl, cycloalkylcarbonyloxyalkyl, silyloxyalkyl, aralkyl, arylalkenyl, arylcarbonyl, aryloxycarbonyl, aralkoxycarbonyl, arylthioalkyl, aralkanoyl, aroyl, carboxyl, formyl, alkenylcarbonyl, alkynylcarbonyl, Het¹oxyalkyl, Het¹alkoxycarbonyl, Het¹oxycarbonyl, Het¹aryloxyalkyl, Het¹alkyloxyalkyl, Het¹arylthioalkyl, Het¹aryloxycarbonyl, Het¹aralkoxycarbonyl, Het¹oxyalkylcarbonyl, Het¹alkyloxyalkylcarbonyl, Het¹aryloxyalkylcarbonyl, Het¹aralkylcarbonyloxyalkyl, Het²oxyalkyl, Het²alkyloxyalkyl, Het²oxycarbonyl, Het²alkoxycarbonyl, Het²aralkoxycarbonyl, Het²aryloxycarbonyl, Het²aryloxyalkyl, Het²arylthioalkyl, Het²oxyalkylcarbonyl, Het²alkyloxyalkylcarbonyl, Het²aryloxyalkylcarbonyl, Het²carbonyloxyalkyl, Het²alkylcarbonyloxyalkyl, Het²aralkylcarbonyloxyalkyl, CR⁶=NR⁷, CR⁶=N(OR⁷),

with R⁶ and R⁷ being independently selected from the group comprising hydrogen, hydroxyl, alkyl, aryl, Het¹, Het¹alkyl, Het¹aryl, alkenyl, alkynyl, aminoalkyl, aminoaryl, alkylcarbonylamino, arylcarbonylamino, alkylthiocarbonylamino and arylthiocarbonylamino;

30 wherein R² and R³ are independently selected from the group comprising hydroxyl, alkyloxy, alkyloxyalkyloxy, cycloalkyloxy, cycloalkylalkyloxy, aralkyloxy, aryloxyalkyloxy, silyloxy, alkylcarbonyloxy, arylcarbonyloxy, cycloalkylcarbonyloxy, aryloxycarbonylalkyloxy, formyloxy, Het¹alkyloxy, Het¹oxy, Het¹oxyalkyloxy, Het¹aryloxy, Het¹aralkyloxy, Het¹cycloalkyloxy, Het¹carbonyloxy, Het¹alkanoyloxy, Het¹aralkanoyloxy, Het¹aryloxyalkyloxy,

Het²oxy, Het²alkyloxy; Het²oxyalkyloxy, Het²aralkyloxy, Het²cycloalkyloxy, Het²alkanoyloxy, Het²aralkanoyloxy, Het²carbonyloxy, Het²aryloxy, Het²aryloxyalkyloxy,

wherein R¹ R² and R³ are optionally substituted by one or more substituents independently selected from the group indicated above; and

5 wherein R⁴ is oxo and R⁵ is hydrogen or alkyl.

According to a preferred embodiment, the present invention relates to a compound having the formula I, wherein R¹ is selected from the group comprising alkyl, alkenyl, alkynyl, alkyloxyalkyl, alkylthioalkyl, alkanoyl, cycloalkylalkyl, cycloalkylcarbonyl, cycloalkylalkanoyl, 10 cycloalkylthioalkyl, silyloxyalkyl, aralkyl, arylalkenyl, arylcarbonyl, arylthioalkyl, aralkanoyl, aroyl, carboxyl, formyl, alkenylcarbonyl, alkynylcarbonyl, Het¹oxyalkyl, Het¹aryloxyalkyl, Het¹alkyloxyalkyl, Het¹arylthioalkyl, Het¹oxyalkylcarbonyl, Het¹alkyloxyalkylcarbonyl, Het¹aryloxyalkylcarbonyl, Het²oxyalkyl, Het²alkyloxyalkyl, Het²aryloxyalkyl, Het²arylthioalkyl, Het²oxyalkylcarbonyl, Het²alkyloxyalkylcarbonyl, Het²aryloxyalkylcarbonyl, CR⁶=NR⁷, 15 CR⁶=N(OR⁷),

with R⁶ and R⁷ being independently selected from the group comprising hydrogen, hydroxyl, alkyl, aryl, Het¹, Het¹alkyl, Het¹aryl, alkenyl, alkynyl, aminoalkyl, aminoaryl, alkylcarbonylamino, arylcarbonylamino alkylthiocarbonylamino and arylthiocarbonylamino;

wherein R² and R³ are independently selected from the group comprising hydroxyl, 20 alkylcarbonyloxy, arylcarbonyloxy, cycloalkylcarbonyloxy, formyloxy, Het¹carbonyloxy, Het¹alkanoyloxy, Het¹aralkanoyloxy, Het²carbonyloxy, Het²alkanoyloxy, Het²aralkanoyloxy,

wherein R¹ R² and R³ are optionally substituted by one or more substituents independently selected from the group indicated above; and

wherein R⁴ is oxo and R⁵ is hydrogen or alkyl.

25

According to yet another preferred embodiment, the present invention relates to a compound having the formula I wherein R¹ is selected from the group comprising alkyl, alkenyl, alkynyl, alkyloxyalkyl, alkylthioalkyl, cycloalkylalkyl, cycloalkylthioalkyl, silyloxyalkyl, aralkyl, arylalkenyl, arylthioalkyl, carboxyl, formyl, Het¹oxyalkyl, Het¹aryloxyalkyl, Het¹alkyloxyalkyl, 30 Het¹arylthioalkyl, Het²oxyalkyl, Het²alkyloxyalkyl, Het²aryloxyalkyl, Het²arylthioalkyl, optionally substituted by one or more substituents independently selected from the group indicated above; wherein R² and R³ are hydroxyl and wherein R⁴ is oxo and R⁵ is hydrogen.

According to a even more preferred embodiment, the present invention relates to a compound having the formula I wherein R^1 is selected from the group comprising alkyl, alkenyl, alkynyl, alkyloxyalkyl, cycloalkylalkyl, silyloxyalkyl, aralkyl, arylalkenyl, carboxyl, formyl, Het¹oxyalkyl, Het¹aryloxyalkyl, Het¹alkyloxyalkyl, Het²oxyalkyl, Het²alkyloxyalkyl, Het²aryloxyalkyl, optionally substituted by one or more substituents independently selected from the group indicated above; an wherein R^2 and R^3 are hydroxyl, R^4 is oxo and R^5 is hydrogen.

Even more preferred, the compound according to any the invention has an R^1 being selected from the group comprising alkyl, carboxyl, formyl; an R^2 and R^3 group being hydroxyl, an R^4 group being oxo and a R^5 being hydrogen.

In a preferred embodiment, the present invention relates to a compound having formula I, wherein R^1 is formyl, R^2 and R^3 are hydroxyl R^4 is oxo and R^5 is hydrogen. This particular compound is referred to herein as 2'' oxo-voruscharin and is represented by the formula II:

formula II : 2'' oxo-voruscharin

The present invention aims to provide novel cardenolide glycosides, which have a cytotoxic activity, and which can consequently be used for in medical applications. As explained above, In another aspect, the present invention also relate to novel analogues of the *C. procera* cardenolide glycoside uscharin. The novel uscharin analogues according to the invention may be either extracted from the plant or synthesized. In another embodiment the present invention thus relates to a compound of the formula I or a pharmaceutically acceptable salt thereof,

formula I

wherein R^1 is selected from the group comprising alkyl, alkenyl, alkynyl, alkyloxyalkyl, alkylthioalkyl, alkyloxycarbonyl, alkanoyl, cycloalkylalkyl, cycloalkylcarbonyl, cycloalkylalkanoyl, cycloalkylalkoxycarbonyl, cycloalkylthioalkyl, alkylcarbonyloxyalkyl, arylcarbonyloxyalkyl, cycloalkylcarbonyloxyalkyl, silyloxyalkyl, aralkyl, arylalkenyl, arylcarbonyl, aryloxycarbonyl, aralkoxycarbonyl, arylthioalkyl, aralkanoyl, aroyl, silyloxyalkyl, carboxyl, alkenylcarbonyl, alkynylcarbonyl, Het¹oxyalkyl, Het¹alkoxycarbonyl, Het¹oxycarbonyl, Het¹aryloxyalkyl, Het¹alkyloxyalkyl, Het¹arylthioalkyl, Het¹aryloxycarbonyl, Het¹aralkoxycarbonyl, Het¹oxyalkylcarbonyl, Het¹alkyloxyalkylcarbonyl, Het¹aryloxyalkylcarbonyl, Het¹carbonyloxyalkyl, Het¹alkylcarbonyloxyalkyl, Het¹aralkylcarbonyloxyalkyl, Het²oxyalkyl, Het²alkyloxyalkyl, Het²oxycarbonyl, Het²alkoxycarbonyl, Het²aralkoxycarbonyl, Het²aryloxycarbonyl, Het²aryloxyalkyl, Het²arylthioalkyl, Het²oxyalkylcarbonyl, Het²alkyloxyalkylcarbonyl, Het²aryloxyalkylcarbonyl, Het²carbonyloxyalkyl, Het²alkylcarbonyloxyalkyl, Het²aralkylcarbonyloxyalkyl, $CR^6=NR^7$, $CR^6=N(OR^7)$,

with R^6 and R^7 being independently selected from the group comprising hydrogen, hydroxyl, alkyl, aryl, Het¹, Het¹alkyl, Het¹aryl, alkenyl, alkynyl, aminoalkyl, aminoaryl, alkylcarbonylamino, arylcarbonylamino, alkylthiocarbonylamino and arylthiocarbonylamino;

wherein R^2 and R^3 have the same definition as indicated above;

wherein R^1 , R^2 and R^3 are optionally substituted by one or more substituents independently selected from the group as indicated above, and

wherein R^4 and R^5 are hydrogen or alkyl.

In a preferred embodiment the uscharin analogue according to the invention is a compound having the formula I wherein R^1 is selected from the group comprising alkyl, alkenyl, alkynyl, alkyloxyalkyl, alkylthioalkyl, alkanoyl, cycloalkylalkyl, cycloalkylcarbonyl, cycloalkylalkanoyl, cycloalkylthioalkyl, silyloxyalkyl, aralkyl, arylalkenyl, arylcarbonyl, arylthioalkyl, aralkanoyl, aroyl, silyloxyalkyl, carboxyl, alkenylcarbonyl, alkynylcarbonyl, Het¹oxyalkyl, Het¹aryloxyalkyl,

Het¹alkyloxyalkyl, Het¹arylthioalkyl, Het¹oxyalkylcarbonyl, Het¹alkyloxyalkylcarbonyl, Het¹aryloxyalkylcarbonyl, Het²oxyalkyl, Het²alkyloxyalkyl, Het²aryloxyalkyl, Het²arylthioalkyl, Het²oxyalkylcarbonyl, Het²alkyloxyalkylcarbonyl, Het²aryloxyalkylcarbonyl, CR⁶=NR⁷, CR⁶=N(OR⁷), with R⁶ and R⁷ being independently selected from the group comprising hydrogen, hydroxyl, alkyl, aryl, Het¹, Het¹alkyl, Het¹aryl, alkenyl, alkynyl, aminoalkyl, aminoaryl, alkylcarbonylamino, arylcarbonylamino, alkylthiocarbonylamino and arylthiocarbonylamino; wherein R² and R³ have the same definition as above indicated; wherein R¹, R² and R³ are optionally substituted by one or more substituents independently selected from the group as indicated above, and wherein R⁴ and R⁵ are hydrogen or alkyl.

10

In a even more preferred embodiment, the invention relates to an uscharin analogue having the formula I, wherein R¹ is selected from the group comprising alkyl, alkenyl, alkynyl, alkyloxyalkyl, alkylthioalkyl, cycloalkylalkyl, cycloalkylthioalkyl, silyloxyalkyl, aralkyl, arylalkenyl, arylthioalkyl, silyloxyalkyl, carboxyl, Het¹oxyalkyl, Het¹aryloxyalkyl, Het¹alkyloxyalkyl, Het¹arylthioalkyl, Het²oxyalkyl, Het²alkyloxyalkyl, Het²aryloxyalkyl, Het²arylthioalkyl, optionally substituted by one or more substituents independently selected from the group indicated in above; wherein R² and R³ are hydroxyl and wherein R⁴ and R⁵ are hydrogen or alkyl.

15

In another preferred embodiment, the invention relates to an uscharin analogue having the formula I, wherein R¹ is selected from the group comprising alkyl, alkenyl, alkynyl, alkyloxyalkyl, cycloalkylalkyl, silyloxyalkyl, aralkyl, arylalkenyl, carboxyl, Het¹oxyalkyl, Het¹aryloxyalkyl, Het¹alkyloxyalkyl, Het²oxyalkyl, Het²alkyloxyalkyl, Het²aryloxyalkyl, optionally substituted by one or more substituents independently selected from the group indicated above; wherein R² and R³ are hydroxyl and wherein R⁴ and R⁵ are hydrogen.

25

Another further embodiment of the invention relates to a compound of formula I, wherein R¹ is selected from the group comprising alkenyl, alkynyl, alkyloxyalkyl, alkylthioalkyl, alkyloxycarbonyl, alkanoyl, cycloalkylalkyl, cycloalkylcarbonyl, cycloalkylalkanoyl, cycloalkylalkoxycarbonyl, cycloalkylthioalkyl, alkylcarbonyloxyalkyl, arylcarbonyloxyalkyl, cycloalkylcarbonyloxyalkyl, silyloxyalkyl, aralkyl, arylalkenyl, arylcarbonyl, aryloxycarbonyl, aralkoxycarbonyl, arylthioalkyl, aralkanoyl, aroyl, silyloxyalkyl, carboxyl, alkenylcarbonyl, alkynylcarbonyl, Het¹oxyalkyl, Het¹alkoxycarbonyl, Het¹oxycarbonyl, Het¹aryloxyalkyl, Het¹alkyloxyalkyl, Het¹arylthioalkyl, Het¹aryloxycarbonyl, Het¹aralkoxycarbonyl,

30

Het¹oxyalkylcarbonyl, Het¹alkyloxyalkylcarbonyl, Het¹aryloxyalkylcarbonyl,
 Het¹carbonyloxyalkyl, Het¹alkylcarbonyloxyalkyl, Het¹aralkylcarbonyloxyalkyl, Het²oxyalkyl,
 Het²alkyloxyalkyl, Het²oxycarbonyl, Het²alkoxycarbonyl, Het²aralkoxycarbonyl,
 Het²aryloxyalkyl, Het²aryloxyalkyl, Het²arylthioalkyl, Het²oxyalkylcarbonyl,
 5 Het²alkyloxyalkylcarbonyl, Het²aryloxyalkylcarbonyl, Het²carbonyloxyalkyl,
 Het²alkylcarbonyloxyalkyl, Het²aralkylcarbonyloxyalkyl, CR⁶=NR⁷, CR⁶=N(OR⁷),

with R⁶ and R⁷ being independently selected from the group comprising hydrogen, hydroxyl, alkyl, aryl, Het¹, Het¹alkyl, Het¹aryl, alkenyl, alkynyl, aminoalkyl, aminoaryl, alkylcarbonylamino, arylcarbonylamino alkylthiocarbonylamino and arylthiocarbonylamino;

10 wherein R¹ is optionally substituted by one or more substituents independently selected from the group as indicated above,

wherein R² and R³ are hydroxyl and wherein R⁴ is replaced by a double bond between the N atom and the C carbon atom of the N-containing heterocyclic ring of formula I; and wherein R⁵ is hydrogen.

15 According to this embodiment, this compound may also be represented by the formula III:

formula III

20 In a further embodiment, the present invention relates to a compound of formula III, wherein R¹ is selected from the group comprising alkenyl, alkynyl, alkyloxyalkyl, cycloalkylalkyl, silyloxyalkyl, aralkyl, arylalkenyl, carboxyl, Het¹oxyalkyl, Het¹aryloxyalkyl, Het¹alkyloxyalkyl, Het²oxyalkyl, Het²alkyloxyalkyl, Het²aryloxyalkyl, optionally substituted by one or more substituents independently selected from the group indicated in above.

25

Whenever used hereinafter, the term "compounds of the invention" or "analogues" or a similar term is meant to include the compounds of general formula I, formula II or formula III, i.e. the 2" oxo-voruscharin and its analogues, the uscharin analogues and any subgroup thereof. This

term also refers to the compounds as depicted in Table A and their *N*-oxides, salts, stereoisomeric forms, racemic mixtures, pro-drugs, esters and metabolites, as well as their quaternized nitrogen analogues. The *N*-oxide forms of said compounds are meant to comprise compounds wherein one or several nitrogen atoms are oxidized to the so-called *N*-oxide.

The term "pro-drug" as used herein means the pharmacologically acceptable derivatives such as esters, amides and phosphates, such that the resulting *in vivo* biotransformation product of the derivative is the active drug. The reference by Goodman and Gilman (The Pharmacological Basis of Therapeutics, 8th Ed, McGraw-Hill, Int. Ed. 1992, "Biotransformation of Drugs", p 13-15) describing pro-drugs generally is hereby incorporated. Pro-drugs of the compounds of the invention can be prepared by modifying functional groups present in said component in such a way that the modifications are cleaved, either in routine manipulation or *in vivo*, to the parent component. Typical examples of pro-drugs are described for instance in WO 99/33795, WO 99/33815, WO 99/33793 and WO 99/33792 all incorporated herein by reference. Pro-drugs are characterized by excellent aqueous solubility, increased bioavailability and are readily metabolized into the active inhibitors *in vivo*.

The analogues according to the invention may also exist in their tautomeric forms. Such forms, although not explicitly indicated in the analogues described herein, are intended to be included within the scope of the present invention.

The term stereochemically isomeric forms of the analogues according to the invention, as used herein, defines all possible compounds made up of the same atoms bonded by the same sequence of bonds but having different three-dimensional structures which are not interchangeable, which the compounds of the present invention may possess. Unless otherwise mentioned or indicated, the chemical designation of a compound herein encompasses the mixture of all possible stereochemically isomeric forms, which said compound may possess. Said mixture may contain all diastereomers and/or enantiomers of the basic molecular structure of said compound. All stereochemically isomeric forms of the compounds of the invention either in pure form or in admixture with each other are intended to be embraced within the scope of the present invention.

For therapeutic use, the salts of the analogues according to the invention, are those wherein the counterion is pharmaceutically or physiologically acceptable.

The pharmaceutically acceptable salts of the analogues according to the invention, i.e. in the form of water-, oil-soluble, or dispersible products, include the conventional non-toxic salts or the quaternary ammonium salts which are formed, e.g., from inorganic or organic acids or bases. Examples of such acid addition salts include acetate, adipate, alginate, aspartate, benzoate, benzenesulfonate, bisulfate, butyrate, citrate, camphorate, camphorsulfonate, cyclopentanepropionate, digluconate, dodecylsulfate, ethanesulfonate, fumarate, glucoheptanoate, glycerophosphate, hemisulfate, heptanoate, hexanoate, hydrochloride, hydrobromide, hydroiodide, 2-hydroxyethanesulfonate, lactate, maleate, methanesulfonate, 2-naphthalenesulfonate, nicotinate, oxalate, pamoate, pectinate, persulfate, 3-phenylpropionate, picrate, pivalate, propionate, succinate, tartrate, thiocyanate, tosylate, and undecanoate. Base salts include ammonium salts, alkali metal salts such as sodium and potassium salts, alkaline earth metal salts such as calcium and magnesium salts, salts with organic bases such as dicyclohexylamine salts, N-methyl-D-glucamine, and salts with amino acids such as sarginine, lysine, and so forth. Also, the basic nitrogen-containing groups may be quaternized with such agents as lower alkyl halides, such as methyl, ethyl, propyl, and butyl chloride, bromides and iodides; dialkyl sulfates like dimethyl, diethyl, dibutyl; and diamyl sulfates, long chain halides such as decyl, lauryl, myristyl and stearyl chlorides, bromides and iodides, aralkyl halides like benzyl and phenethyl-bromides and others. Other pharmaceutically acceptable salts include the sulfate salt ethanolate and sulfate salts.

The pharmaceutically acceptable esters of the analogues according to the invention refer to non-toxic esters, preferably the alkyl esters such as methyl, ethyl, propyl, isopropyl, butyl, isobutyl, or pentyl esters, of which the methyl ester is preferred. However, other esters such as phenyl-alkyl may be employed if desired.

The compounds according to the invention show cytotoxic activities, which implies that the may be used in various medical applications. As is demonstrated in the examples given below, the compounds according to the invention have *in vitro* anti-tumor activity.

Furthermore, the compounds according to the invention exhibit a low toxicity level. "Toxicity" is related to the detrimental effect a compound may exhibit on healthy cells, tissues or

organs. The toxicity level of the compounds according to the invention is surprisingly low. The compounds according to the invention combine the essential features of a good anti-tumor activity and a low level of toxicity. Consequently the compounds according to the invention may be used in pharmaceutical compositions for the treatment of various diseases. In addition, because they have a low level of toxicity the compounds according to the invention may be used during longer periods of treatments.

The present invention also relates to a pharmaceutical composition comprising a pharmaceutically acceptable excipient and a therapeutic amount of a compound according to the invention. More in particular, the present invention relates to a pharmaceutical composition comprising a therapeutically effective amount of 2" oxo-voruscharin and a pharmaceutically acceptable excipient.

The term "therapeutically effective amount" as used herein means that amount of active compound or component or pharmaceutical agent that elicits the biological or medicinal response in a tissue, system, animal or human that is being sought by a researcher, veterinarian, medical doctor or other clinician, which includes alleviation of the symptoms of the disease being treated.

The pharmaceutical composition can be prepared in a manner known per se to one of skill in the art. For this purpose, at least one uscharin analogue having formula I or any subgroup thereof, one or more solid or liquid pharmaceutical excipients and, if desired, in combination with other pharmaceutical active compounds, are brought into a suitable administration form or dosage form which can then be used as a pharmaceutical in human medicine or veterinary medicine.

Particular forms of the pharmaceutical composition may be, for example, solutions, suspensions, emulsions, creams, tablets, capsules, nasal sprays, liposomes or micro-reservoirs, especially compositions in orally ingestible or sterile injectable form, for example, as sterile injectable aqueous or oleaginous suspensions or suppositories. The preferred form of composition contemplated is the dry solid form, which includes capsules, granules, tablets, pills, boluses and powders. The solid carrier may comprise one or more excipients, e.g. lactose, fillers, disintegrating agents, binders, e.g. cellulose, carboxymethylcellulose or starch or anti-stick agents, e.g. magnesium stearate, to prevent tablets from adhering to tableting

equipment. Tablets, pills and boluses may be formed so as to disintegrate rapidly or to provide slow release of the active ingredient.

In order to enhance the solubility and/or the stability of the compounds of a pharmaceutical composition according to the invention, it can be advantageous to employ α -, β - or γ -cyclodextrins or their derivatives. In addition, co-solvents such as alcohols may improve the solubility and/or the stability of the compounds. In the preparation of aqueous compositions, addition of salts of the compounds of the invention are obviously more suitable due to their increased water solubility.

Appropriate cyclodextrins are α -, β - or γ -cyclodextrins (CDs) or ethers and mixed ethers thereof wherein one or more of the hydroxy groups of the anhydroglucose units of the cyclodextrin are substituted with alkyl, particularly methyl, ethyl or isopropyl, e.g. randomly methylated β -CD; hydroxyalkyl, particularly hydroxyethyl, hydroxypropyl or hydroxybutyl; carboxyalkyl, particularly carboxymethyl or carboxyethyl; alkylcarbonyl, particularly acetyl; alkyloxycarbonylalkyl or carboxyalkyloxyalkyl, particularly carboxymethoxypropyl or carboxyethoxypropyl; alkylcarbonyloxyalkyl, particularly 2-acetyloxypropyl. Especially noteworthy as complexants and/or solubilizers are β -CD, randomly methylated β -CD, 2,6-dimethyl- β -CD, 2-hydroxyethyl- β -CD, 2-hydroxyethyl- γ -CD, 2-hydroxypropyl- γ -CD and (2-carboxymethoxy)propyl- β -CD, and in particular 2-hydroxypropyl- β -CD (2-HP- β -CD). The term mixed ether denotes cyclodextrin derivatives wherein at least two cyclodextrin hydroxy groups are etherified with different groups such as, for example, hydroxypropyl and hydroxyethyl. An interesting way of formulating the analogues in combination with a cyclodextrin or a derivative thereof has been described in EP-A-721,331. Although the formulations described therein are with antifungal active ingredients, they are equally interesting for formulating the analogues. Said formulations may also be rendered more palatable by adding pharmaceutically acceptable sweeteners and/or flavors.

More in particular, the compositions may be formulated in a pharmaceutical formulation comprising a therapeutically effective amount of particles consisting of a solid dispersion of the compounds of the invention and one or more pharmaceutically acceptable water-soluble polymers.

The term "a solid dispersion" defines a system in a solid state (as opposed to a liquid or gaseous state) comprising at least two components, wherein one component is dispersed more or less evenly throughout the other component or components. When said dispersion of the components is such that the system is chemically and physically uniform or homogenous throughout or consists of one phase as defined in thermodynamics, such a solid dispersion is referred to as "a solid solution". Solid solutions are preferred physical systems because the components therein are usually readily bioavailable to the organisms to which they are administered. The term "a solid dispersion" also comprises dispersions that are less homogenous throughout than solid solutions. Such dispersions are not chemically and physically uniform throughout or comprise more than one phase.

The water-soluble polymer is conveniently a polymer that has an apparent viscosity of 1 to 100 mPa.s when dissolved in a 2 % aqueous solution at 20°C solution. Preferred water-soluble polymers are hydroxypropyl methylcelluloses or HPMC. HPMC having a methoxy degree of substitution from about 0.8 to about 2.5 and a hydroxypropyl molar substitution from about 0.05 to about 3.0 are generally water soluble. Methoxy degree of substitution refers to the average number of methyl ether groups present per anhydroglucose unit of the cellulose molecule. Hydroxy-propyl molar substitution refers to the average number of moles of propylene oxide which have reacted with each anhydroglucose unit of the cellulose molecule. The uscharin analogues as defined hereinabove can be prepared by first preparing a solid dispersion of the uscharin analogues, and then optionally grinding or milling that dispersion. Various techniques exist for preparing solid dispersions including melt-extrusion, spray-drying and solution-evaporation, melt-extrusion being preferred.

It may further be convenient to formulate the analogues in the form of nanoparticles which have a surface modifier adsorbed on the surface thereof in an amount sufficient to maintain an effective average particle size of less than 1000 nm. Suitable surface modifiers can preferably be selected from known organic and inorganic pharmaceutical excipients. Such excipients include various polymers, low molecular weight oligomers, natural products and surfactants. Preferred surface modifiers include nonionic and anionic surfactants.

Yet another interesting way of formulating the compounds according to the invention involves a pharmaceutical composition whereby the compounds are incorporated in hydrophilic polymers and applying this mixture as a coat film over many small beads, thus yielding a

composition with good bio-availability which can conveniently be manufactured and which is suitable for preparing pharmaceutical dosage forms for oral administration. Said beads comprise (a) a central, rounded or spherical core, (b) a coating film of a hydrophilic polymer and an antiretroviral agent and (c) a seal-coating polymer layer. Materials suitable for use as
5 cores in the beads are manifold, provided that said materials are pharmaceutically acceptable and have appropriate dimensions and firmness. Examples of such materials are polymers, inorganic substances, organic substances, and saccharides and derivatives thereof.

Another important feature attributed to the compounds according to the invention is their
10 broad application possibility. The compounds according to the invention are highly active against several types of cancers. As will be shown in the examples described below, the compounds according to the invention exert significant anti-tumor effects on several tumor models tested, including glioma, colon, lung and bladder cancer (see examples). Importantly,
15 the compounds according to the invention exhibit anti-tumor activity on a broad panel of histological tumor types.

Therefore, due to their favorable pharmacological properties the compounds according to the present invention are particularly suitable for use as medicaments in the treatment of individuals suffering from diseases associated with cell proliferation. In another embodiment,
20 the compounds according to the present invention are used as a medicament. In yet another embodiment, the compounds according to the present invention are used in the preparation of a medicament for treating diseases associated with cell proliferation. In particular the compounds according to the present invention are used in the preparation of a medicament for treating cancer.

25 The term "individual," as used herein refers to an animal, preferably a mammal, and most preferably a human, who has been the object of treatment, observation or experiment.

The term "diseases associated with cell proliferation" as used herein refers to, but is not
30 limited to, any type of cancer or condition involving cell proliferation. The compounds of the invention may be especially used in the treatment of cancers such as leukemia, non-small cell lung cancer, small cell lung cancer, colon cancer, CNS cancer, melanoma, ovarian cancer, renal cancer, prostate cancer, breast cancer, glioma, colon cancer, bladder cancer and lymphoma.

In addition, the compounds according to the invention may also be very suitable in the treatment of scar tissue and wounds. It is believed that most, if not all, of the compounds of the present invention can act as active ingredients in treating scar tissue and in promoting wound healing and tissue regeneration.

In another embodiment, the invention relates to a method of treatment of diseases associated with cell proliferation comprising administering to an individual in need of such treatment a pharmaceutical composition according to the invention. In particular, the invention relates to a method of treating cancer comprising administering to an individual in need of such treatment a pharmaceutical composition according to the invention.

For these purposes, the pharmaceutical composition of the present invention may be administered orally, parenterally, i.e. including subcutaneous injections, intravenous, intramuscular, intrasternal injection or infusion techniques, by inhalation spray, or rectally, in dosage unit formulations containing conventional non-toxic pharmaceutically acceptable carriers, adjuvants and vehicles.

In accordance with the method of the present invention, said pharmaceutical composition can be administered separately at different times during the course of therapy or concurrently in divided or single combination forms. The present invention is therefore to be understood as embracing all such regimes of simultaneous or alternating treatment and the term "administering" is to be interpreted accordingly.

Essentially, the primary modes of treatment of solid tumor cancers comprise surgery, radiation therapy and chemotherapy, separately and in combination. The compounds according to the invention are suitable for use in combination with these medicinal techniques. The compounds of the invention may be useful in increasing the sensitivity of tumor cells to radiation in radiotherapy and also in potentiating or enhancing damage to tumors by chemotherapeutic agents. The compounds and their pharmaceutically acceptable salts may also be useful for sensitizing multidrug-resistant tumor cells. The compounds according to the invention are useful therapeutic compounds for administration in conjunction with other DNA-damaging cytotoxic drugs or radiation used in radiotherapy to potentiate their effect.

In another embodiment of the method of the invention, the administration may be performed with food, e.g., a high-fat meal. The term 'with food' means the consumption of a meal either during or no more than about one hour before or after administration of a pharmaceutical composition according to the invention.

For an oral administration form, the compositions of the present invention can be mixed with suitable additives, such as excipients, stabilizers or inert diluents, and brought by means of the customary methods into the suitable administration forms, such as tablets, coated tablets, hard capsules, aqueous, alcoholic, or oily solutions. Examples of suitable inert carriers are gum arabic, magnesia, magnesium carbonate, potassium phosphate, lactose, glucose, or starch, in particular, corn starch. In this case, the preparation can be carried out both as dry and as moist granules. Suitable oily excipients or solvents are vegetable or animal oils, such as sunflower oil or cod liver oil. Suitable solvents for aqueous or alcoholic solutions are water, ethanol, sugar solutions, or mixtures thereof. Polyethylene glycols and polypropylene glycols are also useful as further auxiliaries for other administration forms. As immediate release tablets, these compositions may contain microcrystalline cellulose, dicalcium phosphate, starch, magnesium stearate and lactose and/or other excipients, binders, extenders, disintegrants, diluents and lubricants known in the art.

The oral administration of a pharmaceutical composition comprising an uscharin analogue according to the invention, or a pharmaceutically acceptable salt or ester thereof, is suitably accomplished by uniformly and intimately blending together a suitable amount of the uscharin analogue in the form of a powder, optionally also including a finely divided solid carrier, and encapsulating the blend in, for example, a hard gelatin capsule. The solid carrier can include one or more substances, which act as binders, lubricants, disintegrating agents, coloring agents, and the like. Suitable solid carriers include, for example, calcium phosphate, magnesium stearate, talc, sugars, lactose, dextrin, starch, gelatin, cellulose, polyvinylpyrrolidone, low melting waxes and ion exchange resins.

Oral administration of a pharmaceutical composition comprising an uscharin analogue according to the invention, or a pharmaceutically acceptable salt or ester thereof can also be accomplished by preparing capsules or tablets containing the desired amount of uscharin analogue, optionally blended with a solid carrier as described above. Compressed tablets

containing the pharmaceutical composition of the invention can be prepared by uniformly and intimately mixing the active ingredient with a solid carrier such as described above to provide a mixture having the necessary compression properties, and then compacting the mixture in a suitable machine to the shape and size desired. Molded tablets maybe made by molding in a
5 suitable machine, a mixture of powdered uscharin analogue moistened with an inert liquid diluent.

When administered by nasal aerosol or inhalation, these compositions may be prepared according to techniques well-known in the art of pharmaceutical formulation and may be
10 prepared as solutions in saline, employing benzyl alcohol or other suitable preservatives, absorption promoters to enhance bioavailability, fluorocarbons, and/or other solubilizing or dispersing agents known in the art. Suitable pharmaceutical formulations for administration in the form of aerosols or sprays are, for example, solutions, suspensions or emulsions of the compounds of the invention or their physiologically tolerable salts in a pharmaceutically
15 acceptable solvent, such as ethanol or water, or a mixture of such solvents. If required, the formulation can also additionally contain other pharmaceutical auxiliaries such as surfactants, emulsifiers and stabilizers as well as a propellant.

For subcutaneous or intravenous administration, the active analogue, if desired with the
20 substances customary therefor such as solubilizers, emulsifiers or further auxiliaries, are brought into solution, suspension, or emulsion. The compounds of the invention can also be lyophilized and the lyophilizates obtained used, for example, for the production of injection or infusion preparations. Suitable solvents are, for example, water, physiological saline solution or alcohols, e.g. ethanol, propanol, glycerol, in addition also sugar solutions such as glucose
25 or mannitol solutions, or alternatively mixtures of the various solvents mentioned. The injectable solutions or suspensions may be formulated according to known art, using suitable non-toxic, parenterally-acceptable diluents or solvents, such as mannitol, 1,3-butanediol, water, Ringer's solution or isotonic sodium chloride solution, or suitable dispersing or wetting and suspending agents, such as sterile, bland, fixed oils, including synthetic mono- or
30 diglycerides, and fatty acids, including oleic acid.

When rectally administered in the form of suppositories, these formulations may be prepared by mixing the compounds according to the invention with a suitable non-irritating excipient,

such as cocoa butter, synthetic glyceride esters or polyethylene glycols, which are solid at ordinary temperatures, but liquidify and/or dissolve in the rectal cavity to release the drug.

5 The pharmaceutical compositions of this invention can be administered to humans in dosage ranges specific for each analogue comprised in said compositions. The compounds comprised in said composition can be administered together or separately.

10 It will be understood, however, that specific dose level and frequency of dosage for any particular patient may be varied and will depend upon a variety of factors including the activity of the specific analogue employed, the metabolic stability and length of action of that compound, the age, body weight, general health, sex, diet, mode and time of administration, rate of excretion, drug combination, the severity of the particular condition, and the host undergoing therapy.

15 The compounds according to the invention may be prepared by a method of chemical synthesis, starting from uscharin or other compounds. The methods of synthesis of the compounds according to the invention involve chemical modifications of uscharin or analogues thereof. Uscharin can be obtained by any convenient method, for example by chemical synthesis. Alternatively, it may also be obtained from extraction and purification from
20 e.g. plants of the *Asclepiadaceae* family, which produce uscharin naturally, e.g. *Calotropis procera*.

The following examples are meant to illustrate the present invention. These examples are presented to exemplify the invention and are not to be considered as limiting the scope of the
25 invention.

EXAMPLES

Example 1 provides a non-limiting list of examples of compounds according to the invention.
30 Example 2 illustrates the preparation of certain compounds according to the invention. Example 3 and 4 illustrate the *in vitro* anti-tumor effects of several compounds according to the invention. The anti-tumor effects of the compounds according to the invention are compared to the anti-tumor activity of uscharin. Example 5 relates to the *in vivo* cytotoxic anti-tumor activity of the compounds according to the invention.

Example 1: *Non-limiting examples of compounds according to the invention are listed hereunder in Table A*

5 **Example 2 Preparation of different compounds according to the invention**

The following example illustrates the preparation of three 2''oxo-voruscharin analogues and three uscharin analogues. These compounds are represented in the table B below.

TABLE B Compounds according to the invention

	R ₁	R ₂	R ₃	R ₄	R ₅	Ref.
Compound A (UBS1244)	-COH	-OH	-OH	=O	-H	2''oxo-voruscharin
Compound B (UBS1450)	-CH ₂ OH	-OH	-OH	=O	-H	2''oxo-voruscharin analogue
Compound C (UBS1514)	-CH ₂ OAc	-OH	-OH	=O	-H	2''oxo-voruscharin analogue
Compound F (UBS1524)	-CH ₂ COCphenyl	-OH	-OH	=O	-H	2''oxo-voruscharin analogue

Compound G (UBS1533)	CH ₂ COOCphenyl	-OH	-OH	Double bond *	-H	Uscharin analogue

10 * means a double bond between the N atom and the C carbon atom of the N-containing heterocyclic ring of formula I

15 **Preparation of 2''oxo-voruscharin analogues**

In order to prepare the 2''oxo-voruscharin analogue, compound B, 5 eq. of NaBH₄ (7.5 mg, 1.98 10⁻⁴ mol) were added to a magnetically stirred solution of 23.9 mg of 2''oxo-voruscharin (0.39 10⁻⁴ mol) in 2 mL of methanol. The mixture was stirred for 1 hour. The solvent was then evaporated under reduced pressure. A flash chromatography on silica gel (CH₂Cl₂;

CH₂Cl₂/MeOH : 95/5) of the crude product provided 15.9 mg of compound B. The yield of this preparation process comprised 66 %.

Another 2"oxo-voruscharin analogue consisted of compound C. This compound was prepared by acetylation of compound B, described above. A solution of 3.04 mg of compound B (5.0 10⁻⁶ mol) in 1 mL of a mixture 50/50 acetic anhydride/ pyridine was stirred for 1 hour 20 minutes at room temperature. 1 mL of water was subsequently added at 0°C under stirring. After 15 minutes, the solvent was evaporated under reduced pressure. A flash chromatography on silica gel (CH₂Cl₂/MeOH : 9/1) of the crude product provided 3.00 mg of compound C. The yield of this preparation process comprised 92 %.

Compound F was prepared by benzylation of compound B. A solution of 10.05 mg of compound B (1.66 10⁻⁵ mole) and 0.5 mL of pyridine was magnetically stirred and 5 drops of benzoyl chloride were stirred for 25 minutes. The residue was taken up with water and extracted with dichloromethane. After separation, the organic layer was evaporated under vacuum. A flash chromatography on silica gel (CH₂Cl₂, CH₂Cl₂/MeOH : 99/1, 98:2, 97:3, 96:4) of the crude product provided 8.13 mg of Compound F. The yield of this preparation process comprised 69%.

20

Preparation of uscharin analogues

The uscharin analogue compound D was prepared by adding 5.5 eq. of NaBH₄ (16.8 mg, 4.44 10⁻⁴ mol) to a magnetically stirred solution of 47 mg of uscharin (0.80 10⁻⁴ mol) in 3 mL of methanol. The mixture was stirred for 10 minutes. The solvent was then evaporated under reduced pressure. A flash chromatography on silica gel (CH₂Cl₂; CH₂Cl₂/MeOH : 95/5) of the crude product provided 31.5 mg of compound D. The yield of this preparation process comprised 67 %.

Another uscharin analogue consisted of compound E. This compound was prepared by acetylation of compound D. A solution of 6.09 mg of compound D (0.10 10⁻⁴ mol) in 2 mL of a mixture 50/50 acetic anhydride/ pyridine was stirred for 2 hours at room temperature. 2 mL of water was added at 0°C under stirring. After 15 minutes, the solvent was evaporated under reduced pressure. A flash chromatography on silica gel (CH₂Cl₂/MeOH : 9/1) of the crude product provided 5.86 mg of compound E. The yield of this preparation process comprised 90%.

Compound G was prepared by benzylation of compound D. A solution of 15.13 mg of compound D ($2.57 \cdot 10^{-5}$ mole) and 0.5 mL of pyridine was magnetically stirred, and 5 drops of benzoyl chloride were stirred for 15 minutes. The residue was taken up with water and extract
5 with dichloromethane. After separation, the organic layer was evaporated under vacuum. A flash chromatography on silica gel (CH_2Cl_2 , $\text{CH}_2\text{Cl}_2/\text{MeOH}$: 9/1) of the crude product provided 12.5 mg of compound G. The yield of this preparation process comprised 70%.

10 **Example 3 Effect of different compounds according to the invention on overall cell growth of a cell line**

In order to characterize the *in vitro* activities of the compounds according to the invention, MTT tests were carried out. The MTT test, which is a well-known test in the art, is an indirect technique that rapidly measures, i.e. within 5 days, the effect of a given product on the overall
15 cell growth. This test measures the number of metabolically active living cells that are able to transform the MTT product (3-(4,5-dimethylthiazol-2-yl)-2,5 diphenyl tetrazolium bromide), having a yellowish color, to the blue product formazan dye by mitochondrial reduction. The amount of formazan obtained at the end of the experiment is measured with a spectrophotometer and is directly proportional to the number of living cells. Determination of
20 the optical density enables a quantitative measurement of the effect of the investigated compounds as compared to the control condition (untreated cells) and to compare it to other reference compound. In the following examples different compounds according to the invention were tested and compared to the reference compound being usharin.

25 Six human cancer cell lines, described in Table C, were tested in the presence of the extract according to the invention. These cell lines covered four histological cancer types, being Glioma, colon, lung and bladder cancer. The cells were allowed to grow in 96-well micro wells with a flat bottom with an amount of 100 μl of cell suspension per well in reason to 4000 cells/well depending on cell type. Each cell line was seeded in its own cell culture medium
30 (Table C).

TABLE C Human cancer cell lines and corresponding cell culture medium used for the MTT experiments

Cell lines	ATCC code	Tissue	Medium	Literature Ref.
Hs683	HTB-138	Glioma	MEM 5% serum	J. Natl. Cancer Inst. 56: 843-849, 1976; <i>ibid.</i> 58: 1455-1463, 1977

HCT-15	CCL-225	Colon	MEM 5% serum	Cancer Res. 39: 1020-1025, 1979
LoVo	CCL-229	Colon	MEM 5% serum	Exp. Cell Res. 101: 414-416, 1976; J. Natl. Cancer Inst. 61: 75-83, 1978; Cancer Res. 39: 2630-2636, 1979
A549	CCL-185	Lung	MEM 5% serum	J. Natl. Cancer Inst. 51: 1417-1423, 1973; Int. J. Cancer 17: 62-70, 1976
J82	HTB-1	Bladder	MEM 5% serum	Br. J. Cancer 38: 64-76, 1978; In Vitro models for cancer research Vol IV. CRC Press, 103-125, 1986

- 5 After a 24-hour period of incubation at 37°C, the culture medium is replaced by 100 µl of fresh medium in which the compound to be tested has been dissolved at different required concentrations. Different compounds were tested at 10^{-9} M, 5×10^{-9} M, 10^{-8} M, 5×10^{-8} M, 10^{-7} M, 5×10^{-7} M, 10^{-6} M, 5×10^{-6} M et 10^{-5} M. Each experimental condition is carried out in hexaplicate. The compounds tested are the compound A, B, C, D and E represented in Table B above.

- 15 After 72 hours of incubation at 37°C with the compound (experimental conditions) or without the compound (control condition), the medium was replaced by 100 µl MTT at the concentration of 1 mg/ml dissolved in RPMI. The micro wells were subsequently incubated during 3 hours at 37° C and centrifuged at 400g during 10 minutes. The MTT was removed and formazan crystals formed, were dissolved in 100 µl DMSO. The micro wells were shaken for 5 minutes and read on a spectrophotometer at the wavelengths of 570 nm corresponding to the maximum formazan absorbance wavelength, and of 630 nm, which is the background noise wavelength.

- 20 For each experimental condition, the mean OD associated with the SEM (standard error of the mean) for each condition (6 wells) was calculated. The percentage of remaining living

cells in comparison with the control was calculated. Results of these experiments are represented in figures 2 to 6.

Figure 1 represents the anti-tumor activity of the known compound uscharin on 5 of the 6 tested cell lines (see Table B). The human tumor cell line issued from bladder (J82) showed a weaker sensitivity to uscharin.

As illustrated on figure 2 to 6 the compounds according to the invention also exerted an anti-tumor activity for 5 of the 6 tested cell lines. Only the human tumor cell lines issued from bladder presented weaker sensitivity to the 4 compounds than the remaining 5 cell lines.

Among the 5 compounds, the compound E presented the weakest cytotoxic activity.

The concentration at which the compounds according to the invention kill 50% of cell population, i.e. the IC_{50} value, is represented in Table D.

TABLE D Comparison of the IC_{50} value of uscharin with that of the compounds according to the invention

	Hs683	U-373	HCT-15	LoVo	A549	J82
uscharin	5×10^{-9} - 10^{-9}	5×10^{-8} - 10^{-8}	5×10^{-8} - 10^{-8}	10^{-8} - 5×10^{-9}	5×10^{-8} - 10^{-8}	10^{-5} - 5×10^{-6}
Compound A (UBS1244)	5×10^{-9} - 10^{-9}	5×10^{-8} - 10^{-8}	5×10^{-8} - 10^{-8}	10^{-8} - 5×10^{-9}	5×10^{-8} - 10^{-8}	$>10^{-5}$
Compound B (UBS1450)	5×10^{-8} - 10^{-8}	5×10^{-8} - 10^{-8}	5×10^{-8} - 10^{-8}	5×10^{-9} - 10^{-9}	10^{-8}	10^{-5} - 5×10^{-6}
Compound C (UBS1514)	5×10^{-8} - 10^{-8}	5×10^{-8} - 10^{-8}	5×10^{-8} - 10^{-8}	5×10^{-8} - 10^{-8}	5×10^{-8} - 10^{-6}	$>10^{-5}$
Compound D (UBS1390)	5×10^{-9} - 10^{-9}	5×10^{-8} - 10^{-8}	5×10^{-8} - 10^{-8}	5×10^{-9} - 10^{-9}	5×10^{-8} - 10^{-8}	10^{-5} - 5×10^{-6}
Compound E (UBS1398)	5×10^{-6} - 10^{-6}	5×10^{-6} - 10^{-6}	5×10^{-6} - 10^{-6}	5×10^{-6} - 10^{-6}	5×10^{-6} - 10^{-6}	$>10^{-5}$

The IC_{50} values for uscharin and 2"oxo-voruscharin ranged between 5×10^{-8} and 10^{-9} M depending on the tested cell line except for J82 where the IC_{50} value ranged between 10^{-5} and 5×10^{-6} M for uscharin and higher than 10^{-5} M for 2"oxo-voruscharin (see table D).

The IC_{50} value 2"oxo-voruscharin was 1000 fold lower than the IC_{50} value of its analogue compounds B for the cell line Hs683. The growth of U-373, HCT-15, LoVo cell lines was affected in the same way by 2"oxo-voruscharin and its analogue compounds B. Depending on the cell line, the IC_{50} value 2"oxo-voruscharin was 100 to 1000 fold lower than the IC_{50} value of its analogue compounds C. The J82 cell line was the less sensitive than the other tested cell lines.

Table C also indicated that uscharin and its analogue compound D showed similar IC_{50} values, and thus a similar anti-tumor activity independent of the tested cell line. The other uscharin analogue compound E showed a lower anti-tumor activity than uscharin and the compound D as indicated by its higher IC_{50} values.

Figure 7 compares the cytotoxic activity of uscharin and 2"oxo-voruscharin (compound A) on 6 cell lines. Both compounds induced a similar anti-tumor effect on each tested cell line. The J82 (bladder cancer) cell line was less sensitive than the other cell lines tested. Figure 8 compares the cytotoxic activity of 2"oxo-voruscharin and its two analogues, compounds B and C. On Hs683, 2"oxo-voruscharin presented a stronger activity than compound B. The growth of U-373, HCT-15, LoVo cell lines was affected in the same way by 2"oxo-voruscharin and compound B. The J82 cell line was the less sensitive than the other tested cell lines. Figure 9 compares the activity of uscharin and its two analogues, compounds D and E. As can be seen, compound D exerted a similar anti-tumor effect as uscharin. Compound E was less active than compound D or uscharin.

In conclusion, the novel compound 2" oxo-voruscharin according to the invention shows dramatic anti-tumor effects on 5 human cancer cell lines assayed in the present experiments. These anti-tumor effects corresponded to marked decreases in the overall growth of these human cancers models belonging to four representative histological types.

Also the 2" oxo-voruscharin analogues, compounds B and C, and the uscharin analogues, compounds D and E show anti-tumor activities.

Example 4 Effect of different compounds according to the invention on cell kinetics

According to the experiments performed by means of the MTT colorimetric assay described in example 2, it is clear that the compounds according to the invention decrease the overall growth of most of the human cancer cell lines submitted to the MTT assay. In the following example the effect of the compound 2" oxo-voruscharin according to the invention on cell kinetics was tested and compared to the effect of the known compound uscharin.

Cell lines were seeded in flasks (25 cm² area) containing 7 ml of culture medium. After 48 hours incubation at 37°C the cell culture medium was replaced by a fresh medium in which the substance to be tested had been dissolved at the different concentrations required. Uscharin and 2" oxo-voruscharin were tested at concentrations, which kill 50% and 30% of the cell population, represented by the IC₅₀ and IC₃₀ values, respectively. After 24 or 72 hours of treatment the cells were harvested in suspension, washed in Phosphate Buffer Saline (PBS) at 4°C and permeabilized with 70 % ethanol (at 4°C) overnight at -20°C. The cells were then washed with PBS and incubated with propidium iodide solution (80 µg/ml) for 30 minutes at 37°C and afterward at 4°C overnight. Ribonuclease A (3% V/V) was added to the PI solution to break doubled-stranded RNA. The portrait of the cell cycle was established for each sample. Software incorporated into the flow cytometer was used to define precisely the percentage of cells in the different cell cycle phases. Each cell cycle phase was reported in terms of peak surface and calculated as a percentage. The surface of the entire cell cycle was 100 %. Each experiment was carried out 3 times. The mean percentage of each different phase and the standard error of the related mean were calculated. Each cell cycle phase of a given condition was compared with the same cell cycle phase of control. The non-treated cells constituted control.

Uscharin and 2" oxo-voruscharin are highly toxic to human tumor cell lines. The concentrations used in the flow cytometry experiments were chosen in accordance with the MTT results (example 2). Three human cancer cell lines, Hs683, J82, and HCT-15 were tested and doses that killed 30 and 50 percent of the cells were applied to investigate whether uscharin and 2" oxo-voruscharin promoted an accumulation in one of the cell cycle phases when the cell cultures were treated for 24 or 72 hours with increasing concentrations of the compounds. The IC₅₀ and IC₃₀ values for uscharin and 2" oxo-voruscharin corresponding to the three tested cell lines are represented in Table E.

TABLE E IC_{50} ad IC_{30} values for uscharin and 2" oxo-voruscharin with respect to three human cancer cell lines

Cell lines	Uscharin		2"oxo-voruscharin	
	IC_{50}	IC_{30}	IC_{50}	IC_{30}
Hs683	1.7×10^{-7} M	4.3×10^{-8} M	1.7×10^{-7} M	8.3×10^{-9} M
J82	4.3×10^{-6} M	1.7×10^{-6} M	4.1×10^{-6} M	1.7×10^{-6} M
HCT-15	4.3×10^{-8} M	8.5×10^{-9} M	1.2×10^{-8} M	4.1×10^{-9} M

5 Analysis of Hs683 cells treated with uscharin (Figure 10) showed an accumulation of cells in S-phase when the Hs683 were treated with uscharin at 1.7×10^{-7} M for 24 and 72 hours. This effect was statistically significant. A significant accumulation in G2/M-phase was observed when the cells were treated with uscharin at 1.7×10^{-7} M for 24 hours. 2"Oxo-voruscharin induced an accumulation in G2/M phase at 8.3×10^{-9} M after 24 hours of treatment and at both
10 concentrations for the 72 hours-treatment (Figure 11). These effects were significant.

The analyses of cell cycle of the J82 cells treated with uscharin (Figure 12) showed that, a significant increase in the S-population occurred independent of the concentrations applied or the timing of treatment. 2"Oxo-voruscharin induced an increase of S-population only after 72
15 hours of treatment at both concentrations tested (Figure 13).

The analyses of cell cycle of the HCT-15 cells treated with uscharin (Figure 14) and with 2"oxo-voruscharin (Figure 15) showed that both compounds induced an accumulation in S-phase after 72 hours of treatment at the highest concentration tested respectively 4.3×10^{-8} M
20 and 1.2×10^{-8} M.

The following table F recapitulates the most important effects obtained with uscharin and 2" oxo-voruscharin on the cycle kinetics of the 3 cell lines used after 24 and 72 hours-treatment. In conclusion, uscharin induced an accumulation in S-phase in each cell line tested. 2"Oxo-voruscharin induced an accumulation in the S phase and in G2/M phase. These results
25 indicate that uscharin induced more accumulation of the cells in the S phase than 2"oxo-voruscharin. Accumulation of cells in the S phase upon treatment with uscharin indicates that the cells undergo DNA damage or breaks. Thus, a higher accumulation of cells in the S phase during uscharin treatment than during 2"oxo-voruscharin treatments indicates that 2"

oxo-voruscharin has a lower toxicity than uscharin and thus may induce less side-effects on healthy cells.

TABLE F Effects of uscharin and 2" oxo-voruscharin on the cell cycle kinetics of three human cancer cell lines

Cell lines	Time	uscharin			2" oxo-voruscharin		
		G0/G1	S	G2/M	G0/G1	S	G2/M

Example 5 In vivo effects of compounds according to the invention

The *in vivo* effects of the compounds according to the invention can be studied on mice grafted with different types of tumors.

The compounds according to the invention are evaluated on the different cancer models at different doses. The mice are inoculated with the compounds according to the invention by different means, e.g. subcutaneously, or the compounds according to the invention are administered orally.

Results of *in vivo* tests show that the compound 2" oxo-voruscharin shows a higher anti-tumor effect than the known compound uscharin, i.e. a higher activity at lower doses. Also the compound 2" oxo-voruscharin according to the invention has a lower level of toxicity and thus induces fewer side effects compared to the compound uscharin. As a result the compound 2" oxo-voruscharin has a broader range of application possibilities and may have greater therapeutic effects.

CLAIMS

1. A compound of the formula I or a pharmaceutically acceptable salt thereof,

5

formula I

- wherein R¹ is selected from the group comprising alkyl, alkenyl, alkynyl, alkyloxy, alkyloxyalkyl, alkylthioalkyl, alkyloxycarbonyl, alkylthiocarbonyl, alkanoyl, cycloalkylalkyl, cycloalkylcarbonyl, cycloalkylalkanoyl, cycloalkylthiocarbonyl, cycloalkylalkoxycarbonyl, cycloalkylalkoxythiocarbonyl, cycloalkylthioalkyl, alkylcarbonyloxyalkyl, arylcarbonyloxyalkyl, cycloalkylcarbonyloxyalkyl, silyloxyalkyl, aralkyl, arylalkenyl, arylcarbonyl, aryloxycarbonyl, arylthiocarbonyl, aralkoxycarbonyl, arylalkylthiocarbonyl, aryloxyalkyl, arylthioalkyl, haloalkyl, hydroxyalkyl, aralkanoyl, aroyl, aryloxycarbonylalkyl, aryloxyalkanoyl, carboxyl, formyl, alkenylcarbonyl, alkynylcarbonyl, Het¹, Het¹alkyl, Het¹oxyalkyl, Het¹aryl, Het¹aralkyl, Het¹cycloalkyl, Het¹carbonyl, Het¹alkoxycarbonyl, Het¹alkylthiocarbonyl, Het¹oxycarbonyl, Het¹thiocarbonyl, Het¹alkanoyl, Het¹aralkanoyl, Het¹aryloxyalkyl, Het¹alkyloxyalkyl, Het¹arylthioalkyl, Het¹aryloxycarbonyl, Het¹aralkoxycarbonyl, Het¹aroyl, Het¹oxyalkylcarbonyl, Het¹alkyloxyalkylcarbonyl, Het¹aryloxyalkylcarbonyl, Het¹carbonyloxyalkyl, Het¹alkylcarbonyloxyalkyl, Het¹aralkylcarbonyloxyalkyl, Het²alkyl; Het²oxyalkyl, Het²alkyloxyalkyl, Het²aralkyl, Het²carbonyl, Het²oxycarbonyl, Het²thiocarbonyl, Het²alkanoyl, Het²alkylthiocarbonyl, Het²alkoxycarbonyl, Het²aralkanoyl, Het²aralkoxycarbonyl, Het²aryloxycarbonyl, Het²aroyl, Het²aryloxyalkyl, Het²arylthioalkyl, Het²oxyalkylcarbonyl, Het²alkyloxyalkylcarbonyl, Het²aryloxyalkylcarbonyl, Het²carbonyloxyalkyl, Het²alkylcarbonyloxyalkyl, Het²aralkylcarbonyloxyalkyl, cyano, aminocarbonyl, aminoalkanoyl, aminoalkyl, CR⁶=NR⁷ or CR⁶=N(OR⁷),

with R⁶ and R⁷ being independently selected from the group comprising hydrogen, hydroxyl, alkyl, aryl, Het¹, Het¹alkyl, Het¹aryl, alkenyl, alkynyl, aminoalkyl, aminoaryl, alkylcarbonylamino, arylcarbonylamino, alkylthiocarbonylamino and arylthiocarbonylamino;

wherein R^2 and R^3 are independently selected from the group comprising hydroxyl, alkyloxy, alkylsilyloxy, arylsilyloxy, alkyloxyalkyloxy, cycloalkyloxy, cycloalkylalkyloxy, aralkyloxy, aryloxyalkyloxy, silyloxy, alkylcarbonyloxy, arylcarbonyloxy, cycloalkylcarbonyloxy, haloalkyloxy, hydroxyalkyloxy, aralkanoyloxy, aroyloxy, aryloxyalkylalkyloxy, formyloxy, Het¹alkyloxy, Het¹oxy, Het¹oxyalkyloxy, Het¹aryloxy, Het¹aralkyloxy, Het¹cycloalkyloxy, Het¹carbonyloxy, Het¹oxycarbonyloxy, Het¹alkanoyloxy, Het¹aralkanoyloxy, Het¹aryloxyalkyloxy, Het¹aroyl, Het²oxy, Het²alkyloxy, Het²oxyalkyloxy, Het²aralkyloxy, Het²cycloalkyloxy, Het²alkanoyloxy, Het²aralkanoyloxy, Het²carbonyloxyl, Het²aryloxy, Het²aryloxyalkyloxy,

wherein R^1 , R^2 and R^3 are optionally substituted by one or more substituents independently selected from the group comprising alkyl, aralkyl, aryl, Het¹, Het², cycloalkyl, alkyloxycarbonyl, carboxyl, aminocarbonyl, mono- or di(alkyl)aminocarbonyl, aminosulfonyl, alkylS(=O)_t, hydroxy, cyano, halogen or amino optionally mono- or disubstituted wherein the substituents are independently selected from the group comprising alkyl, aryl, aralkyl, aryloxy, arylamino, arylthio, aryloxyalkyl, arylaminoalkyl, aralkoxy, alkylthio, alkoxy, aryloxyalkoxy, arylaminoalkoxy, aralkylamino, aryloxyalkylamino, arylaminoalkylamino, arylthioalkoxy, arylthioalkylamino, aralkylthio, aryloxyalkylthio, arylaminoalkylthio, arylthioalkylthio, alkylamino, cycloalkyl, cycloalkylalkyl, Het¹, Het², Het¹alkyl, Het²alkyl, Het¹amino, Het²amino, Het¹alkylamino, Het²alkylamino, Het¹thio, Het²thio, Het¹alkylthio, Het²alkylthio, Het¹oxy and Het²oxy, OR^8 , SR^8 , $SO_2NR^8R^9$, $SO_2N(OH)R^8$, CN, $CR^8=NR^9$, $S(O)R^8$, SO_2R^8 , $CR^8=N(OR^9)$, N_3 , NO_2 , NR^8R^9 , $N(OH)R^8$, $C(O)R^8$, $C(S)R^8$, CO_2R^8 , $C(O)SR^8$, $C(O)NR^8R^9$, $C(S)NR^8R^9$, $C(O)N(OH)R^8$, $C(S)N(OH)R^8$, $NR^8C(O)R^9$, $NR^8C(S)R^9$, $N(OH)C(O)R^9$, $N(OH)C(S)R^8$, $NR^8CO_2R^9$, $NR^8C(O)NR^9R^{10}$, and $NR^8C(S)NR^9R^{10}$, $N(OH)CO_2R^8$, $NR^8C(O)SR^9$, $N(OH)C(O)NR^8R^9$, $N(OH)C(S)NR^8R^9$, $NR^8C(O)N(OH)R^9$, $NR^8C(S)N(OH)R^9$, $NR^8SO_2R^9$, $NHSO_2NR^8R^9$, $NR^8SO_2NHR^9$, $P(O)(OR^8)(OR^9)$,

with t being an integer between 1 and 2, and R^8 , R^9 and R^{10} being each independently selected from the group comprising hydrogen, hydroxyl, alkyl, aryl, Het¹, Het¹alkyl, Het¹aryl, alkenyl, alkynyl, aminoalkyl, aminoaryl, alkylcarbonylamino, arylcarbonylamino, alkylthiocarbonylamino and arylthiocarbonylamino; and

wherein R^4 is oxo and R^5 is hydrogen or alkyl.

2. A compound according to claim 1,

wherein R¹ is selected from the group comprising alkyl, alkenyl, alkynyl, alkyloxyalkyl, alkylthioalkyl, alkyloxycarbonyl, alkanoyl, cycloalkylalkyl, cycloalkylcarbonyl, cycloalkylalkanoyl, cycloalkylalkoxycarbonyl, cycloalkylthioalkyl, alkylcarbonyloxyalkyl, arylcarbonyloxyalkyl, cycloalkylcarbonyloxyalkyl, silyloxyalkyl, aralkyl, arylalkenyl, arylcarbonyl, aryloxycarbonyl, aralkoxycarbonyl, arylthioalkyl, aralkanoyl, aroyl, carboxyl, formyl, alkenylcarbonyl, alkynylcarbonyl, Het¹oxyalkyl, Het¹alkoxycarbonyl, Het¹oxycarbonyl, Het¹aryloxyalkyl, Het¹alkyloxyalkyl, Het¹arylthioalkyl, Het¹aryloxycarbonyl, Het¹aralkoxycarbonyl, Het¹oxyalkylcarbonyl, Het¹alkyloxyalkylcarbonyl, Het¹aryloxyalkylcarbonyl, Het¹carbonyloxyalkyl, Het¹alkylcarbonyloxyalkyl, Het¹aralkylcarbonyloxyalkyl, Het²oxyalkyl, Het²alkyloxyalkyl, Het²oxycarbonyl, Het²alkoxycarbonyl, Het²aralkoxycarbonyl, Het²aryloxycarbonyl, Het²aryloxyalkyl, Het²arylthioalkyl, Het²oxyalkylcarbonyl, Het²alkyloxyalkylcarbonyl, Het²aryloxyalkylcarbonyl, Het²carbonyloxyalkyl, Het²alkylcarbonyloxyalkyl, Het²aralkylcarbonyloxyalkyl, CR⁶=NR⁷, CR⁶=N(OR⁷),

with R⁶ and R⁷ being independently selected from the group comprising hydrogen, hydroxyl, alkyl, aryl, Het¹, Het¹alkyl, Het¹aryl, alkenyl, alkynyl, aminoalkyl, aminoaryl, alkylcarbonylamino, arylcarbonylamino, alkylthiocarbonylamino and arylthiocarbonylamino;

wherein R² and R³ are independently selected from the group comprising hydroxyl, alkyloxy, alkyloxyalkyloxy, cycloalkyloxy, cycloalkylalkyloxy, aralkyloxy, aryloxyalkyloxy, silyloxy, alkylcarbonyloxy, arylcarbonyloxy, cycloalkylcarbonyloxy, aryloxycarbonylalkyloxy, formyloxy, Het¹alkyloxy, Het¹oxy, Het¹oxyalkyloxy, Het¹aryloxy, Het¹aralkyloxy, Het¹cycloalkyloxy, Het¹carbonyloxy, Het¹alkanoyloxy, Het¹aralkanoyloxy, Het¹aryloxyalkyloxy, Het²oxy, Het²alkyloxy, Het²oxyalkyloxy, Het²aralkyloxy, Het²cycloalkyloxy, Het²alkanoyloxy, Het²aralkanoyloxy, Het²carbonyloxy, Het²aryloxy, Het²aryloxyalkyloxy,

wherein R¹, R² and R³ are optionally substituted by one or more substituents independently selected from the group indicated in claim 1; and

wherein R⁴ is oxo and R⁵ is hydrogen or alkyl.

3. A compound according to claim 1 or 2,

wherein R¹ is selected from the group comprising alkyl, alkenyl, alkynyl, alkyloxyalkyl, alkylthioalkyl, alkanoyl, cycloalkylalkyl, cycloalkylcarbonyl, cycloalkylalkanoyl, cycloalkylthioalkyl, silyloxyalkyl, aralkyl, arylalkenyl, arylcarbonyl, arylthioalkyl, aralkanoyl, aroyl, carboxyl, formyl, alkenylcarbonyl, alkynylcarbonyl, Het¹oxyalkyl, Het¹aryloxyalkyl,

Het¹alkyloxyalkyl, Het¹arylthioalkyl, Het¹oxyalkylcarbonyl, Het¹alkyloxyalkylcarbonyl, Het¹aryloxyalkylcarbonyl, Het²oxyalkyl, Het²alkyloxyalkyl, Het²aryloxyalkyl, Het²arylthioalkyl, Het²oxyalkylcarbonyl, Het²alkyloxyalkylcarbonyl, Het²aryloxyalkylcarbonyl, CR⁶=NR⁷, CR⁶=N(OR⁷),

- 5 with R⁶ and R⁷ being independently selected from the group comprising hydrogen, hydroxyl, alkyl, aryl, Het¹, Het¹alkyl, Het¹aryl, alkenyl, alkynyl, aminoalkyl, aminoaryl, alkylcarbonylamino, arylcarbonylamino alkylthiocarbonylamino and arylthiocarbonylamino; wherein R² and R³ are independently selected from the group comprising hydroxyl, alkylcarbonyloxy, arylcarbonyloxy, cycloalkylcarbonyloxy, formyloxy, Het¹carbonyloxy, 10 Het¹alkanoyloxy, Het¹aralkanoyloxy, Het²carbonyloxy, Het²alkanoyloxy, Het²aralkanoyloxy, wherein R¹, R² and R³ are optionally substituted by one or more substituents independently selected from the group indicated in claim 1; and wherein R⁴ is oxo and R⁵ is hydrogen or alkyl.

- 15 4. A compound according to any of claims 1 to 3, wherein R¹ is selected from the group comprising alkyl, alkenyl, alkynyl, alkyloxyalkyl, alkylthioalkyl, cycloalkylalkyl, cycloalkylthioalkyl, silyloxyalkyl, aralkyl, arylalkenyl, arylthioalkyl, carboxyl, formyl, Het¹oxyalkyl, Het¹aryloxyalkyl, Het¹alkyloxyalkyl, Het¹arylthioalkyl, Het²oxyalkyl, Het²alkyloxyalkyl, Het²aryloxyalkyl, Het²arylthioalkyl, optionally substituted by one or more 20 substituents independently selected from the group indicated in claim 1; wherein R² and R³ are hydroxyl and wherein R⁴ is oxo and R⁵ is hydrogen.

5. A compound according to any of claims 1 to 4, wherein R¹ is selected from the group comprising alkyl, alkenyl, alkynyl, alkyloxyalkyl, cycloalkylalkyl, silyloxyalkyl, aralkyl, 25 arylalkenyl, carboxyl, formyl, Het¹oxyalkyl, Het¹aryloxyalkyl, Het¹alkyloxyalkyl, Het²oxyalkyl, Het²alkyloxyalkyl, Het²aryloxyalkyl, optionally substituted by one or more substituents independently selected from the group indicated in claim 1; wherein R² and R³ are hydroxyl, R⁴ is oxo and R⁵ is hydrogen.

- 30 6. A compound according to any of claims 1 to 5, wherein R¹ is selected from the group comprising alkyl, carboxyl, formyl; wherein R² and R³ are hydroxyl, and wherein R⁴ is oxo and R⁵ is hydrogen.

7. A compound according to claim 6, wherein R^1 is formyl, R^2 and R^3 are hydroxyl R^4 is oxo and R^5 is hydrogen.

8. A compound of the formula I or a pharmaceutically acceptable salt or ester thereof,
5 formula I

wherein R^1 is selected from the group comprising alkyl, alkenyl, alkynyl, alkyloxyalkyl, alkylthioalkyl, alkyloxycarbonyl, alkanoyl, cycloalkylalkyl, cycloalkylcarbonyl, cycloalkylalkanoyl, cycloalkylalkoxycarbonyl, cycloalkylthioalkyl, alkylcarbonyloxyalkyl, 10 arylcarbonyloxyalkyl, cycloalkylcarbonyloxyalkyl, silyloxyalkyl, aralkyl, arylalkenyl, arylcarbonyl, aryloxycarbonyl, aralkoxycarbonyl, arylthioalkyl, aralkanoyl, aroyl, silyloxyalkyl, carboxyl, alkenylcarbonyl, alkynylcarbonyl, Het¹oxyalkyl, Het¹alkoxycarbonyl, Het¹oxycarbonyl, Het¹aryloxyalkyl, Het¹alkyloxyalkyl, Het¹arylthioalkyl, Het¹aryloxycarbonyl, Het¹aralkoxycarbonyl, Het¹oxyalkylcarbonyl, Het¹alkyloxyalkylcarbonyl, 15 Het¹aryloxyalkylcarbonyl, Het¹carbonyloxyalkyl, Het¹alkylcarbonyloxyalkyl, Het¹aralkylcarbonyloxyalkyl, Het²oxyalkyl, Het²alkyloxyalkyl, Het²oxycarbonyl, Het²alkoxycarbonyl, Het²aralkoxycarbonyl, Het²aryloxycarbonyl, Het²aryloxyalkyl, Het²arylthioalkyl, Het²oxyalkylcarbonyl, Het²alkyloxyalkylcarbonyl, Het²aryloxyalkylcarbonyl, Het²carbonyloxyalkyl, Het²alkylcarbonyloxyalkyl, Het²aralkylcarbonyloxyalkyl, $CR^6=NR^7$, 20 $CR^6=N(OR^7)$,

with R^6 and R^7 being independently selected from the group comprising hydrogen, hydroxyl, alkyl, aryl, Het¹, Het¹alkyl, Het¹aryl, alkenyl, alkynyl, aminoalkyl, aminoaryl, alkylcarbonylamino, arylcarbonylamino, alkylthiocarbonylamino and arylthiocarbonylamino;

wherein R^2 and R^3 have the same definition as in claim 1;

25 wherein R^1 , R^2 and R^3 are optionally substituted by one or more substituents independently selected from the group as indicated in claim 1, and

wherein R^4 and R^5 are hydrogen or alkyl.

9. A compound according to claim 8,

wherein R^1 is selected from the group comprising alkyl, alkenyl, alkynyl, alkyloxyalkyl, alkylthioalkyl, alkanoyl, cycloalkylalkyl, cycloalkylcarbonyl, cycloalkylalkanoyl, cycloalkylthioalkyl, silyloxyalkyl, aralkyl, arylalkenyl, arylcarbonyl, arylthioalkyl, aralkanoyl, aroyl, silyloxyalkyl, carboxyl, alkenylcarbonyl, alkynylcarbonyl, Het¹oxyalkyl, Het¹aryloxyalkyl, Het¹alkyloxyalkyl, Het¹arylthioalkyl, Het¹oxyalkylcarbonyl, Het¹alkyloxyalkylcarbonyl, Het¹aryloxyalkylcarbonyl, Het²oxyalkyl, Het²alkyloxyalkyl, Het²aryloxyalkyl, Het²arylthioalkyl, Het²oxyalkylcarbonyl, Het²alkyloxyalkylcarbonyl, Het²aryloxyalkylcarbonyl, $CR^6=NR^7$, $CR^6=N(OR^7)$, with R^6 and R^7 being independently selected from the group comprising hydrogen, hydroxyl, alkyl, aryl, Het¹, Het¹alkyl, Het¹aryl, alkenyl, alkynyl, aminoalkyl, aminoaryl, alkylcarbonylamino, arylcarbonylamino, alkylthiocarbonylamino and arylthiocarbonylamino;

wherein R^2 and R^3 have the same definition as in claim 1;

wherein R^1 , R^2 and R^3 are optionally substituted by one or more substituents

independently selected from the group as indicated in claims 1, and

wherein R^4 and R^5 are hydrogen or alkyl.

10. A compound according to claim 8 or 9, wherein R^1 is selected from the group comprising alkyl, alkenyl, alkynyl, alkyloxyalkyl, alkylthioalkyl, cycloalkylalkyl, cycloalkylthioalkyl, silyloxyalkyl, aralkyl, arylalkenyl, arylthioalkyl, silyloxyalkyl, carboxyl, Het¹oxyalkyl, Het¹aryloxyalkyl, Het¹alkyloxyalkyl, Het¹arylthioalkyl, Het²oxyalkyl, Het²alkyloxyalkyl, Het²aryloxyalkyl, Het²arylthioalkyl, optionally substituted by one or more substituents independently selected from the group indicated in claim 1; wherein R^2 and R^3 are hydroxyl and wherein R^4 and R^5 are hydrogen or alkyl.

11. A compound according to any of claims 8 to 10, wherein R^1 is selected from the group comprising alkyl, alkenyl, alkynyl, alkyloxyalkyl, cycloalkylalkyl, silyloxyalkyl, aralkyl, arylalkenyl, carboxyl, Het¹oxyalkyl, Het¹aryloxyalkyl, Het¹alkyloxyalkyl, Het²oxyalkyl, Het²alkyloxyalkyl, Het²aryloxyalkyl, optionally substituted by one or more substituents independently selected from the group indicated in claim 1; wherein R^2 and R^3 are hydroxyl and wherein R^4 and R^5 are hydrogen.

with R⁶ and R⁷ being independently selected from the group comprising hydrogen, hydroxyl, alkyl, aryl, Het¹, Het¹alkyl, Het¹aryl, alkenyl, alkynyl, aminoalkyl, aminoaryl, alkylcarbonylamino, arylcarbonylamino, alkylthiocarbonylamino and arylthiocarbonylamino;

wherein R² and R³ are hydroxyl and wherein R⁴ is replaced by a double bond between the N atom and the C carbon atom of the N-containing heterocyclic ring of formula I; and
25 wherein R⁵ is hydrogen.

13. A compound according to claim 12, wherein R¹ is selected from the group comprising alkenyl, alkynyl, alkyloxyalkyl, cycloalkylalkyl, silyloxyalkyl, aralkyl, arylalkenyl, carboxyl,

Het¹oxyalkyl, Het¹aryloxyalkyl, Het¹alkyloxyalkyl, Het²oxyalkyl, Het²alkyloxyalkyl, Het²aryloxyalkyl, optionally substituted by one or more substituents independently selected from the group indicated in claim 1; wherein R² and R³ are hydroxyl and wherein R⁴ and R⁵ are hydrogen.

5

14. A compound according to claim 13, wherein R¹ has the same definition as in claim 12, wherein R² and R³ are hydroxyl; wherein R⁴ is replaced by a double bond between the N atom and the C carbon atom of the N-containing heterocyclic ring of formula I; and wherein R⁵ is hydrogen.

10

15. Compound of formula I or a pharmaceutically acceptable salt or ester thereof, wherein R¹, R², R³, R⁴ and R⁵ are selected as in Table A.

15

16. A pharmaceutical composition comprising a pharmaceutically acceptable excipient and a therapeutically effective amount of a compound according to any of claims 1-15.

17. A pharmaceutical composition comprising a pharmaceutically acceptable excipient and a therapeutically effective amount of a compound according to claim 7.

20

18. A compound according to any of claims 1 to 15 for use as a medicament.

19. Use of a compound according to any of claims 1 to 15 for the preparation of a medicament for treating cancer.

25

20. Use of a compound according to any of claims 1 to 15 in the treatment of cancer.

21. Method of treating cancer comprising administering to an individual in need of such treatment a pharmaceutical composition according to claim 16 or 17.

2" OXO-VORUSCHARIN AND ANALOGUES THEREOF

ABSTRACT

5 The present invention relates to the novel compound 2" oxo-voruscharin and analogues. In addition, the present invention relates to pharmaceutical compositions comprising the novel 2" oxo-voruscharin or analogues. The present invention further relates to the 2" oxo-voruscharin and analogues for use as a medicament and for use in the preparation of a medicament for treating cancer. The present invention also relates to a method of treating
10 cancer.
